

## Kern Council of Governments: 2016 Community Survey

August 2016

The Kern Council of Governments commissioned Godbe Research to conduct a telephone survey of residents of Kern County with the following research objectives:
> Gauge residents' overall opinion of current and future quality of life in their city or town;
$>$ Survey the importance of specific issues related to future quality of life in the County;
> Understand the daily commute behavior of the average resident;
> Determine support for a countywide sales tax measure to support transportation improvements and it's impact on library and jail funding; and
$>$ Identify any differences in opinion due to demographic and/or behavioral characteristics.

## Methodology Overview

> Data Collection
> Universe
> Fielding Dates
> Interview Length
> Sample Size
> Margin of Error

Telephone \& Online Interviewing
602,435 adult (age 18 or older) residents of Kern County

April 5 through April 18, 2016
22 minutes
1,208 (Online=203; Cell=167; Landline=838) 126 interviews were conducted in Spanish
$\pm 2.82 \%$

Executive Summary

## Executive Summary I

> The survey showed the highest level of satisfaction with the quality of life among Kern County residents measured by any survey from 2008 to 2016, with 85 percent indicating they are satisfied. Further, results continue the trend, that the opinion of the quality of life has exceed 80 percent in each year since 2011.
$>$ Looking ahead to the next 20 years, 41 percent of the residents surveyed think the quality of life in their city or town will be "much better" or "somewhat better," 27 percent think it will "stay about the same," and 27 percent think it will be "somewhat worse" or "much worse." This is a return to almost the same level as in 2012 (42\%).
> In an open-ended format, the "small town atmosphere" continues to be the thing that respondents cited that they liked most about where they live (41\%), and cost of living as a positive has increased (27\%). Contrastingly, "air quality" remains the thing they liked least about their city or town (31\%)

## Executive Summary II

> The 2015 survey assessed the importance of 21 issues in improving the future quality of life in Kern County. The top rated issues for 2016 were:

- Preserving water supply (3.66 on a scale of 0 to 4 )
- Improving the quality of public education (3.60)
- Improving crime prevention and gang prevention programs (3.56)
- Improving water quality (3.43)
- Improving air quality (3.43)
- Creating more high paying jobs (3.41)
- Maintaining local streets and roads (3.39)
- Improving local health care and social services (3.27)
- Improving fire and emergency medical services (3.25)
- Encouraging new businesses to relocate to the County in order to diversify the local economy (3.23)

## Executive Summary III

$>$ Slightly higher than in 2015, but not statistically significant, the results show just slightly more than 3 out of 4 residents typically drive alone in their commute to work or school (78\%). Twenty-two percent indicated that carpooling with be their secondary mode choice.
> Sixty-eight percent of residents reported a commute of 40 minutes or less in 2016, compared to 66 percent in 2015 and 68 percent in 2014.
$>$ Forty percent of respondents rated traffic flow as "Good", while 40 percent raked it as "Fair". Eleven percent said it was "Excellent" and 8.7 percent said it was "Poor".
$>$ Respondents who drive alone were also asked if they would take an alternative if it were available. Twenty-seven percent indicated they would continue driving alone, compared to 32 percent in 2015, 30 percent in 2014, and 42 percent in 2013. Twenty-five percent also said they would car or vanpool.

## Executive Summary IV

> When asked how important public transportation, carpooling and other alternatives to driving alone were for the improving the future quality of life, 39 percent indicated they were "extremely important" or gave it a 4 on scale of 4 to 0 . Additionally, 29 percent said the importance was 3 on the same scale.
> Among single drivers, 19 percent indicated that employer carpool incentives would encourage them to use alternative transportation modes. Fifteen percent indicated a public transit stop near their home or work would encourage them to change, and 14 percent indicated that better transit schedules would help.
> Slightly higher than in 2015, 73 percent of respondents said they would support a half cent sales tax for transportation improvements. Among likely November 2016 voters the level of support was 70 percent.

Key Findings

# Q1. Satisfaction with Quality of Life ( $\mathrm{n}=1,208$ ) 

The first question of the survey asked residents to indicate their level of satisfaction with the quality of life in their city or town. The survey results for 2016 reveal a slight increase in the "Very satisfied" response over 2012 through 2015, with the vast majority of Kern County residents stating they continue to be satisfied. In line with previous results, more than four out of five residents said they are satisfied with the quality of life, and about one in six residents reported some level of dissatisfaction. Less than one percent did not render an opinion or declined to answer the question (DK/NA). The chart on the next page displays the relative satisfaction with quality of life for 2016 at 85.1\%, compared with survey results from 2015 (82.0\%), 2014 (84.3\%), 2012 (81\%), 2010 (78\%), and 2008 (79\%).

## Q1. Satisfaction with Quality of Life ( $\mathrm{n}=1,208$ ) Continued

## Q1. Satisfaction with Quality of Life Gender Comparisons

When the data are analyzed in terms of gender, women tended to report they were "Very satisfied" at higher levels than men.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1208 | 617 | 591 |
| Very satisfied | 519 | 248 | 271 |
|  | $43.0 \%$ | $40.1 \%$ | $45.9 \%$ |
| Somewhat satisfied | 508 | 273 | 235 |
|  | $42.1 \%$ | $44.3 \%$ | $39.8 \%$ |
| Somewhat dissatisfied | 110 | 54 | 55 |
|  | $9.1 \%$ | $8.8 \%$ | $9.3 \%$ |
| DK/NA | 67 | 41 | 26 |
|  | $5.5 \%$ | $6.6 \%$ | $4.4 \%$ |

## Q1. Satisfaction with Quality of Life Age Comparisons

In terms of comparisons by age, 25-to-34-year-olds were more likely to say they are "Somewhat satisfied."

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | 18 to 24 | 25 to 34 | 35 to 44 | 45 to 54 | 55 to 59 | 60 to 64 | 65 to 74 | 75 to 84 | 85 and over | DK/NA |

| DK/NA | $\begin{gathered} 5 \\ .4 \% \end{gathered}$ | $\begin{gathered} 0 \\ .0 \% \end{gathered}$ | $\begin{gathered} 4 \\ .4 \% \\ \hline \end{gathered}$ | $\begin{gathered} 1 \\ .9 \% \\ \hline \end{gathered}$ | $\begin{gathered} 0 \\ .0 \% \\ \hline \end{gathered}$ |

# Q2. Outlook on Future Quality of Life ( $\mathrm{n}=1,208$ ) 

Next, the respondents were asked to predict whether they thought the quality of life in their city or town would become better or worse over the next 20 years, or if it would stay about the same. The 2016 survey results show a significant increase in residents who feel the future will be "Much better" over 2015 results ( $17.4 \%$ in 2016 vs. 10.0\% in 2015). The response category "Stay about the same" shows a corresponding decrease from 2015. Overall, $41.4 \%$ of residents indicated the quality of life would be at least "Somewhat better," compared with $34.2 \%$ for 2015 . On the other hand, $26.7 \%$ of residents predict life will be "Much worse" or "Somewhat worse," revealing a slight decrease from $29.1 \%$ in 2015. Consistent with previous results, $4.9 \%$ did not render an opinion (DK/NA).

The chart illustrating these results is on the following page.

Q2. Outlook on Future Quality of Life $(1,208)$ Continued

## Q2. Outlook on Future Quality of Life Gender Comparisons

There were no statistically significant differences in opinions expressed between men and women.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1208 | 617 | 591 |
| Much better | 210 | 95 | 114 |
|  | $17.4 \%$ | $15.5 \%$ | $19.3 \%$ |
| Somewhat better | 290 | 153 | 137 |
|  | $24.0 \%$ | $24.8 \%$ | $23.2 \%$ |
| Stay about the same | 327 | 175 | 152 |
|  | $27.0 \%$ | $28.3 \%$ | $25.7 \%$ |
| Somewhat worse | 221 | 103 | 118 |
|  | $18.3 \%$ | $16.7 \%$ | $20.0 \%$ |
| Much worse | 101 | 61 | 40 |
|  | $8.4 \%$ | $9.9 \%$ | $6.8 \%$ |
| DK/NA | 59 | 29 | 30 |
|  | $4.9 \%$ | $4.8 \%$ | $5.0 \%$ |

## Q2. Outlook on Future Quality of Life Age Comparisons

When looked at in terms of age, residents ages 18 to 24 were more likely to state that they felt the quality of life would be "Somewhat better" in the next twenty years.

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q2. Outlook on Future Quality of Life

 Ethnicity ComparisonsIn terms of ethnicity, Hispanic or Latino residents were more optimistic and more likely to state they feel the future quality of life would be "Much better" or "Somewhat better." Alternatively, Asian residents were more likely to indicate that they felt the future quality of life would be "Somewhat worse," while Caucasian or White respondents tended to state at higher levels that they felt the future would be "Much worse."

|  | Ethnic Group |  |  |  |  |  |  |  |  |  |

|  | $8.4 \%$ | $18.0 \%$ | $7.9 \%$ | $5.4 \%$ | $10.4 \%$ |

# Q3. Most Liked Features of City or Town ( $\mathrm{n}=1,208$ ) 

Similar to 2015 survey results, when asked what they most liked about their city or town in an open-end format with multiple responses accepted, the most frequent response given by residents was "Small-town atmosphere/sense of community" at 40.6\%. The next response tier included "Cost of living/housing" which showed a sizable gain at $26.9 \%$, over $18.3 \%$ in 2015. This tier was followed by "Location" at $18.7 \%$ and "Safe neighborhood/communities" at $16.1 \%$, both in line with 2015 results. Two responses, "Weather and climate" and "Natural resources" both showed small gains in comparison to 2015. All other responses mirrored 2015 results.

The chart illustrating this data is on the following page.

# Q4. Least Liked Features of City or Town ( $\mathrm{n}=1,208$ ) 

The residents were then asked, again in an open-end format with multiple responses allowed, to report what they like least about their city or town. As in 2015, the most popular response was "Air quality" at $31.3 \%$. The next tier of responses were "Crime rate/gang violence" at $21.5 \%$ and "Job opportunities" at $16.1 \%$. Overall, responses are similar to 2015 survey results, with slight increases for each feature in the current survey results. However, one exception was the response "Job opportunities" which increased significantly from $10.4 \%$ in 2015 to $16.1 \%$ in 2016.

The chart showing the results can be found on the following page.

# Q5. Economic Vitality and Equitable Services ( $\mathrm{n}=1,208$ ) 

In the next question, residents were asked to look forward to the next 20 years and rate the importance of specific issues with respect to improving the future quality of life in Kern County. The results are presented on the following pages, and grouped by similar sets of issues. At the end of this section, there are tables showing all of the issues examined in this portion of the survey, segmented by gender, age, region, ethnicity, and household income.

In this first set of issues, Economic Vitality and Equitable Services, "Creating more high paying jobs (5A)" (mean score of 3.41) garnered an "Extremely important" rating by more than $60 \%$ of the residents, and "Encouraging new businesses to relocate to County (5B)" (mean score of 3.23) was rated as "Extremely important" by more than 50\% of residents. These results are similar to 2015.

The data are presented on the following pages for each of the specific issues included in the Economic Vitality and Equitable Services grouping in the form of a summary chart, comparative table, and subgroup comparisons. This format is followed for each of the issue sections.

## Q5. Economic Vitality and Equitable Services Regional Comparisons

In terms of where they live, residents of West Kern and the Central Valley regions were more likely put higher importance on "Creating more high paying jobs (5A)." Further, residents of the Central Valley also had a higher tendency to cite "Encouraging new businesses to relocate to the County in order to diversify the local economy (5B)."

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5A. Creating more high paying jobs | 3.41 | 3.51 | 3.46 | 3.06 | 3.21 |
| 5B. Encouraging new businesses to relocate to the County in <br> order to diversify the local economy | 3.23 | 3.38 | 3.26 | 2.91 | 3.23 |

# Q5. Community Assets and Infrastructure ( $\mathrm{n}=1,208$ ) 

The next section of the survey was Community Assets and Infrastructure. As presented previously, the 2016 survey results are shown on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

The issues "Revitalizing older neighborhoods and business districts (5C)" and "Creating more affordable housing (5D)" garnered essentially the same results as in 2015 (mean scores of 3.15 and 2.94, respectively). Both issues received an "Extremely important" rating from nearly half of the residents.

## Q5. Community Assets and Infrastructure Regional Comparisons

In terms of area of residence, residents in the Central Valley region were more likely to place higher importance on both of these issues than residents in the other regions.

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5C. Revitalizing older neighborhoods and business districts that <br> are becoming rundown | 3.15 | 3.26 | 3.19 | 2.82 | 3.03 |
| 5D. Creating more affordable housing | 2.94 | 2.75 | 3.03 | 2.53 | 2.63 |

# Q5. Transportation Choices ( $\mathrm{n}=1,208$ ) 

In the next section of the survey, Transportation Choices, survey respondents were asked to rate the importance of issues relating to transportation choices for improving the future quality of life in Kern County. As in the previous sections, the results for the 2016 survey are presented on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

The results of the current survey are essentially identical to the 2015 survey. The data show only one of the seven issues garnering a mean score of at least three on a scale of zero to four, "Maintaining local streets and roads (5G)," which earned a mean score of 3.39 and an "Extremely Important" rating from almost 60\% of residents.

Following this issue was "Maintaining and improving sidewalks and bike lanes (5J)" (mean score of 2.87), "Expanding highways (5E)" (mean score of 2.85), "Reducing traffic congestion (5F)" (mean score of 2.79), and "Improving public transportation to other cities (5I)" (mean score of 2.78). Each of these issues garnered an "Extremely Important" rating of nearly 40\% of the residents.

The remaining issues, "Providing public transportation, carpooling, and other alternatives to driving alone (5K)" (mean score of 2.73) and "Expanding local bus services (5H)" (mean score of 2.69) both achieved an "Extremely Important" rating by slightly more than 30\% of the residents.

## Q5. Transportation Choices Gender Comparisons

In general, transportation issues were of greater importance to women. Women were more likely to place higher importance on all the transportation-related issues and services, with the exception of "Expanding highways (5E)" and "Maintaining local streets and roads (5G),"

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| 5E. Expanding highways | 2.85 | 2.80 | 2.91 |
| 5F. Reducing traffic congestion | 2.79 | 2.64 | 2.95 |
| 5G. Maintaining local streets and roads | 3.39 | 3.37 | 3.42 |
| 5H. Expanding local bus services | 2.69 | 2.49 | 2.92 |
| 5I. Improving public transportation to other cities | 2.78 | 2.60 | 2.97 |
| 5J. Maintaining and improving sidewalks and bike lanes | 2.87 | 2.75 | 3.00 |
| 5K. Providing public transportation, carpooling, and other alternatives to <br> driving alone | 2.73 | 2.58 | 2.89 |

## Q5. Transportation Choices Age Comparisons

In terms of differences in response by age, the 18-to-25-year-olds tended to place higher importance on "Maintaining and improving sidewalks and bike lanes (5J) " and "Providing public transportation, carpooling, and other alternatives to driving alone (5K)." "Reducing traffic congestion" was more likely to be mentioned by residents ages 35 to 44 and 65 to 74. Residents ages 85 and older also had a higher tendency to express importance for "Maintaining and improving sidewalks and bike lanes (5J)."

## Q5. Transportation Choices Regional Comparisons

When analyzed in terms of region, residents of West Kern and the Central Valley regions tended to place higher importance on "Expanding highways (5E)" and "Reducing traffic congestion (5F)." Central Valley residents also more frequently indicated higher importance for "Maintaining local streets and roads (5G)," "Expanding local bus service (5H)," "Maintaining and improving sidewalks and bike lanes (5J)," and "Providing public transportation, carpooling, and other alternatives to driving alone (5K)."

|  | Zip Code Region |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5E. Expanding highways | 2.85 | 2.86 | 2.98 | 2.30 | 2.23 |
| 5F. Reducing traffic congestion | 2.79 | 2.45 | 2.98 | 2.16 | 1.88 |
| 5G. Maintaining local streets and roads | 3.39 | 3.47 | 3.42 | 3.11 | 3.41 |
| 5H. Expanding local bus services | 2.69 | 2.44 | 2.77 | 2.25 | 2.55 |
| 5I. Improving public transportation to other cities | 2.78 | 2.59 | 2.82 | 2.57 | 2.68 |
| 5J. Maintaining and improving sidewalks and bike lanes | 2.87 | 2.43 | 2.92 | 2.75 | 2.79 |
| 5K. Providing public transportation, carpooling, and other <br> alternatives to driving alone | 2.73 | 2.51 | 2.82 | 2.43 | 2.28 |

# Q5. Conserve Undeveloped Land and Natural Resources 

The next set of issues covered in the survey were related to conserving undeveloped land and natural resources for improving the future quality of life in Kern County.

The results of the current survey are nearly identical to those of 2015. Three of the four issues achieved a mean score of at least three on a scale of zero to four. As in 2015, the issue with the highest score was "Preserving water supply (5M)" with a mean score of 3.66 and an "Extremely Important" rating from nearly 80\% of the residents. This was followed by "Improving air quality (5L)" at 3.43 and "Improving water quality (5N)" at 3.43, both with an "Extremely Important" rating from nearly 70\% of the residents. The lowest scoring issue, "Preserving open spaces, native animal habitats (50)" garnered a mean score of 2.96 and was rated as "Extremely Important" by slightly more than 40\% of residents.

The results are shown on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

# Q5. Conserve Undeveloped Land and Natural Resources 

## Gender Comparisons

When analyzing the data in terms of gender, women were more likely to place higher importance on all four issues.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| 5L. Improving air quality | 3.43 | 3.20 | 3.66 |
| 5M. Preserving water supply | 3.66 | 3.54 | 3.79 |
| 5N. Improving water quality | 3.43 | 3.28 | 3.60 |
| 50. Preserving open spaces and native animal habitats | 2.96 | 2.85 | 3.08 |

## Q5. Conserve Undeveloped Land and Natural Resources <br> Age Comparisons

When viewed in terms of age, the youngest residents tended to ascribe more importance to all four issues than residents in the other age groups. Additionally, the 55-to-59-year-olds also were more likely to indicate higher levels of importance for "Improving air quality (5L)."

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q5. Conserve Undeveloped Land and Natural Resources <br> Regional Comparisons

Residents of the Central Valley region were more likely to indicate higher importance for "Preserving water supply (5M)" and "Improving water quality (5N)", while both Central Valley and West Kern residents tended to report higher levels of importance for "Improving air quality (5L)."

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5L. Improving air quality | 3.43 | 3.32 | 3.62 | 2.56 | 2.51 |
| 5M. Preserving water supply | 3.66 | 3.70 | 3.70 | 3.53 | 3.48 |
| 5N. Improving water quality | 3.43 | 3.34 | 3.49 | 3.12 | 3.23 |
| 5O. Preserving open spaces and native animal habitats | 2.96 | 2.85 | 2.97 | 2.97 | 2.87 |

# Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices 

Next, residents were asked to indicate the level of importance for use of compact, efficient development where appropriate and providing a variety of housing choices for improving the future quality of life in Kern County. The issue assessed here, "Developing a variety of housing options, including apartments, townhomes and condominiums (5P)," achieved a mean score of 2.63, which was nearly identical with 2015 results. This issue garnered an "Extremely Important" rating from approximately $30 \%$ of the residents.

The results are presented on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices ( $\mathrm{n}=1,208$ ) Continued

# Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices Gender Comparisons 

In terms of gender, women had a higher tendency to ascribe importance for this issue than men.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
|  | 2.63 | 2.45 | 2.82 |

# Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices Age Comparisons 

Residents ages 18 to 34 tended to be more likely to indicate higher importance for this issue,

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | $\begin{gathered} 18 \text { to } \\ 24 \end{gathered}$ | $\begin{gathered} 25 \text { to } \\ 34 \end{gathered}$ | $\begin{gathered} 35 \text { to } \\ 44 \\ \hline \end{gathered}$ | $\begin{gathered} 45 \text { to } \\ 54 \end{gathered}$ | $\begin{gathered} 55 \text { to } \\ 59 \end{gathered}$ | $\begin{gathered} 60 \text { to } \\ 64 \end{gathered}$ | $\begin{gathered} 65 \text { to } \\ 74 \end{gathered}$ | $\begin{gathered} 75 \text { to } \\ 84 \end{gathered}$ | 85 and over | DK/NA |
| 5P. Developing a variety of housing options, including apartments, townhomes and condominiums | 2.63 | 3.06 | 2.70 | 2.68 | 2.30 | 2.44 | 2.37 | 2.54 | 2.65 | 2.59 | 2.70 |

# Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices Regional Comparisons 

For this single issue, Central Valley residents had a higher likelihood to ascribe higher importance than residents from the other regions.

|  | Zip Code Region |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5P. Developing a variety of housing options, including apartments, townhomes and condominiums | 2.63 | 2.38 | 2.73 | 1.95 | 2.43 |

In the final section of this question, residents were asked to rate the importance a variety of services, safety and equity issues for improving the future quality of life in Kern County. The results are presented on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

Four of the five issues achieved nearly identical results in the current survey compared with 2015. However, the issue "Improving crime prevention and gang prevention programs (5S)" garnered a slightly higher score in the current survey results over 2015.

The two highest scoring issues were "Improving the quality of public education (5T)" with a mean score of 3.60, followed by "Improving crime prevention and gang prevention programs (5S)" with a mean score of 3.56. These two issues both received an "Extremely Important" rating from more than 70\% of residents. These are followed by "Improving local health care and social services (5R)" with a mean score of 3.27 and "Improving fire and emergency medical services (5Q)" with a mean score of 3.25. These two issues received an "Extremely Important" rating from more than half of the residents. Lastly, the issue "Improving local libraries (5U)" receive the lowest mean score of the group at 2.82, and was rated as "Extremely Important" by more than 30\% of residents.

## Q5. Services, Safety and Equity Detailed Comparisons

Improving fire and emergency medical services (5Q)

Improving local health care and social services(5R)
Improving crime prevention and gang prevention programs (5S)

Improving the quality of public education (5T)

Improving local libraries (5U)

## Q5. Services, Safety and Equity Regional Comparisons

Central Valley residents tended to more frequently indicate higher importance for "Improving fire and emergency medical services (5Q)," "Improving crime prevention and gang prevention programs (5S)," and "Improving the quality of public education (5T)." In addition, residents of the Central Valley, Mountain, and East Kern regions were more likely to report higher importance for "Improving local libraries (5U)."

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5Q. Improving fire and emergency medical services | 3.25 | 3.10 | 3.30 | 2.98 | 3.11 |
| 5R. Improving local health care and social services | 3.27 | 3.10 | 3.31 | 3.13 | 3.16 |
| 5S. Improving crime prevention and gang prevention programs | 3.56 | 3.26 | 3.63 | 3.28 | 3.30 |
| 5T. Improving the quality of public education | 3.60 | 3.19 | 3.65 | 3.38 | 3.49 |
| 5U. Improving local libraries | 2.82 | 2.19 | 2.86 | 2.77 | 2.81 |

# Q5. Importance of Specific Issues in Next 20 Years 

The current survey assessed the importance of 21 issues related to improving the future quality of life in Kern County. While these issues were not grouped in the questionnaire, they have been grouped into the six topic areas from 2011: (a) Economic Vitality and Equitable Services; (b) Community Assets and Infrastructure; (c) Transportation Choices; (d) Conserving Undeveloped Land and Natural Resources; (e) Use Compact, Efficient Development Where Appropriate and Provide Variety of Housing Choices; and (f) Services and Public Safety.
> The top seven rated issues, across categories, reflect the same responses as in 2015, albeit in a slightly different order:

- "preserving water supply" (3.66 on a scale of 0 to 4 )
" "improving the quality of public education" (3.60)
- "improving crime prevention and gang prevention programs (3.56)
- "improving air quality" (3.43)
" "improving water quality" (3.43)
- "creating more high paying jobs" (3.41)
" "maintaining local streets and roads" (3.39)

# Q5. Importance of Specific Issues in Next 20 Years Gender Comparisons 

|  | Respondent's Gender |  |  |
| :--- | :--- | :--- | :--- |
|  | Total | Male | Female |
| 5A. Creating more high paying jobs | 3.41 | 3.35 | 3.48 |
| 5B. Encouraging new businesses to relocate to the County in order to diversify the local economy | 3.23 | 3.18 | 3.28 |

## Q6. Type of Transportation Used Traveling to Work or School <br> ( $\mathrm{n}=1,208$ )

When compared to the 2015 survey results, the current data is largely similar. However, there were two categories with small variances. More residents reported driving alone (78.1\% in 2016 vs. $73.4 \%$ in 2015) and fewer residents said they don't work outside their home ( $5.4 \%$ in 2016 vs. 9.9 in 2015)

The chart illustrating the results follows on the next two pages.

## Q6. Primary Type of Transportation Used Traveling to Work or School ( $n=1,208$ ) Continued

# Q6. Primary Type of Transportation Used Traveling to Work or School 

## Q6. Primary Type of Transportation Used Traveling to Work or School

There were no statistically significant differences in response between genders.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1208 | 617 | 591 |

|  | $1.5 \%$ | $2.0 \%$ | $1.1 \%$ |
| Carpool | 93 | 46 | 48 |
|  | $7.7 \%$ | $7.4 \%$ | $8.1 \%$ |
| Public transit (bus or shuttle) | $78.1 \%$ | 490 | 453 |
|  | 52 | $79.4 \%$ | $76.7 \%$ |
| Uber/Lyft | $4.3 \%$ | 34 | 28 |
|  | 0 | 0 | $4.8 \%$ |
| Work from home/don't work outside the home | $.0 \%$ | $.0 \%$ | $.0 \%$ |
|  | 2 | 0 | 2 |
|  | $1.4 \%$ | $.0 \%$ | $.3 \%$ |

## Q6. Primary Type of Transportation Used Traveling to Work or School Age Comparisons

Residents ages 60 and older tended to report at higher levels they either work from home or don't work outside the home. This is most likely due to the number of retirees in this age category.

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Q7. Secondary Type of Transportation Used Traveling to Work or School <br> ( $\mathrm{n}=1,126$ )

This was a new question for the survey, in which residents were asked what other secondary types of transportation they used. The most common response was that they carpool ( $22.4 \%$ ), walk ( $16.9 \%$ ) or take public transit (12.7\%). All other responses garnered less than ten percent mentions,

## Q7. Secondary Type of Transportation Used Traveling to Work or School

## Gender Comparisons

Men were more likely to report using a bike as a secondary transit mode.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1126 | 577 | 550 |

## Q8. Rating of Traffic Flow in City or Town ( $\mathrm{n}=1,126$ )

When residents were asked to rate the flow of traffic in their city or town, similar to the 2015 results, slightly more than half responded in the positive ("Excellent" $11.1 \%$ and "Good" $39.7 \%$ ). Two out of five residents indicated a response of "Fair" and less than ten percent said traffic flow was "Poor."

## Q8. Rating of Traffic Flow in City or Town Gender Comparisons

Men more frequently rated the traffic flow in their city or town as "Excellent." On the other hand, women were more likely to indicate it was "Fair."

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1126 | 577 | 550 |
| Excellent | 125 | 78 | 47 |
|  | $11.1 \%$ | $13.5 \%$ | $8.6 \%$ |
| Good | 447 | 235 | 212 |
|  | $39.7 \%$ | $40.8 \%$ | $38.6 \%$ |
| Fair | 455 | 205 | 250 |
|  | $40.4 \%$ | $35.6 \%$ | $45.5 \%$ |
| Poor | 98 | 58 | 40 |
|  | $8.7 \%$ | $10.0 \%$ | $7.3 \%$ |
| DK/NA | 1 | 0 | 0 |
|  | $.1 \%$ | $.1 \%$ | $.1 \%$ |

## Q8. Rating of Traffic Flow in City or Town Age Comparisons

Residents ages 60 to 64 were more likely to say they felt the flow of traffic was "Excellent."

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Q8. Rating of Traffic Flow in City or Town Regional Comparisons

Residents of West Kern, Mountains and East Kern regions had a higher tendency to rate their local traffic flow as "Excellent," whereas, Central Valley residents were more likely to rate their traffic flow as "Fair."

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central <br> Valley | Mountains | East Kern |
| Total | 1126 | 43 | 889 | 81 | 113 |
| Excellent | 125 | 8 | 55 | 29 | 33 |
|  | $11.1 \%$ | $19.1 \%$ | $6.2 \%$ | $35.6 \%$ | $29.3 \%$ |
| Good | 447 | 20 | 356 | 27 | 44 |
|  | $39.7 \%$ | $46.7 \%$ | $40.1 \%$ | $33.4 \%$ | $38.4 \%$ |
| Fair | 455 | 13 | 393 | 16 | 33 |
|  | $40.4 \%$ | $30.3 \%$ | $44.2 \%$ | $19.6 \%$ | $29.4 \%$ |
| Poor | 98 | 1 | 85 | 9 | 3 |
|  | $8.7 \%$ | $3.0 \%$ | $9.5 \%$ | $11.4 \%$ | $2.7 \%$ |

# Q9. Average Commute Time ( $n=1,126$ ) 

While small and statistically insignificant shifts ( $2.0 \%$ and less) are seen in the current survey results compared with 2015, there was a small decrease in the number of respondents who reported an average commute time of 41 to 60 minutes. A 21 to 40 minute commute duration continued to be indicated by the largest percentage of residents (28.0\%), followed by those with an 11 to 20 minute commute (23.8\%). Commutes of 10 minutes or less and 41 to 60 minutes were reported by $16.0 \%$ and $16.1 \%$ of the residents, respectively.

A chart illustrating the comparative results follows on the next two pages.

## Q9. Average Commute Time ( $\mathrm{n}=1,126$ )

Q9. Average Commute Time ( $\mathrm{n}=1,126$ ) Continued

## Q9. Average Commute Time Gender Comparisons

Men tended to more frequently report longer commute times of 31 to 60 minutes and 91 to 120 minutes. On the other hand, women were more likely to indicate a commute time of 21 to 30 minutes.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1126 | 577 | 550 |

## Q9. Average Commute Time Regional Comparisons

When analyzed in terms of region, West Kern and East Kern residents were more likely to report a commute time of 0 to 10 minutes. Central Valley residents tended to indicate at higher levels that they have a 21 to 30 minute commute. Mountain residents more frequently stated they have a 91 to 120 minute commute time.

# Q10. Average Commute Miles ( $\mathrm{n}=1,126$ ) 

Responses to this question in the current survey were largely similar to 2015 results. However, there was one small, but statistically significant decrease in the number of residents who reported a 6 to 10 mile commute distance.

The results are shown in charts on the the next two pages.

## Q10. Average Commute Miles ( $\mathrm{n}=1,126$ ) Continued

## Q10. Average Commute Miles ( $\mathrm{n}=1,126$ ) Continued

## Q10. Average Commute Miles Gender Comparisons

In terms of gender, women were more likely to state that their commute consists of 0 to 10 miles, whereas the men were more likely to report having a longer commute of 31 to 60 miles or 91 to 120 miles.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1126 | 577 | 550 |
| $\mathbf{0 - 1 0}$ | 383 | 166 | 217 |
|  | $34.0 \%$ | $28.8 \%$ | $39.5 \%$ |

## Q10. Average Commute Miles Regional Comparisons

Responses among residents from the four regions are similar. However, Central Valley residents were more likely to state that they commute 11 to 20 miles on average, and Mountains residents had a higher likelihood of reporting a 91 to 120 mile commute.

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central <br> Valley | Mountains | East Kern |

# Q11. Most Likely Alternative Transportation (drive alone only from Q6) ( $\mathrm{n}=943$ ) 

In a follow up question, residents who indicated that they drive alone to work or school in response to Question 6 were asked what type of alternative transportation to driving alone they would choose if it was available in their area. While small variances were observed in the current results when compared with 2015, there were two small but statistically significant shifts. Specifically, more residents said they would take advantage of express bus service as an alternate transportation mode, and fewer residents gave a "None of the above" answer in response.

The results are illustrated in a chart on the following page.

Q11. Most Likely Alternative Transportation (drive alone only from Q6) ( $n=943$ ) Continued

## Q11. Most Likely Alternative Transportation Gender Comparisons

Responses were overall similar between genders. However, men were more likely to give the response "None of the above."

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 943 | 490 | 453 |
| Walk | 90 | 38 | 52 |
|  | $9.5 \%$ | $7.7 \%$ | $11.4 \%$ |
| Bicycle | 77 | 44 | 33 |
|  | $8.1 \%$ | $8.9 \%$ | $7.3 \%$ |
| Traditional bus service | 236 | 112 | 124 |
|  | 124 | $22.9 \%$ | $27.3 \%$ |
| Express bus service | $13.1 \%$ | $13.0 \%$ | 60 |
|  | $12.8 \%$ | 63 | 58 |
| None of the above | 258 | $12.9 \%$ | $12.8 \%$ |
|  | $27.4 \%$ | $30.2 \%$ | 110 |
|  | 38 | $21.3 \%$ |  |

## Q11. Most Likely Alternative Transportation Age Comparisons

Again, the age groups gave largely similar answers. However, residents ages 45 to 54 and 65 to 74 were more likely to state "None of the above" in response.

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Q11. Most Likely Alternative Transportation Regional Comparisons

Residents who live in East Kern had a higher tendency to indicate they would use a bicycle as an alternative transportation method.

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central <br> Valley | Mountains | East Kern |
| Total | 943 | 36 | 743 | 62 | 101 |
| Walk | 90 | 6 | 66 | 9 | 8 |
|  | $9.5 \%$ | $17.8 \%$ | $8.9 \%$ | $13.8 \%$ | $8.1 \%$ |
| Bicycle | 77 | 2 | 58 | 1 | 15 |
|  | $8.1 \%$ | $5.5 \%$ | $7.8 \%$ | $2.3 \%$ | $15.2 \%$ |
| Traditional bus service | 236 | 13 | 190 | 16 | 18 |
|  | $13.1 \%$ | 121 | $35.1 \%$ | $25.6 \%$ | $24.9 \%$ |
| None of the above | $12.8 \%$ | $17.3 \%$ |  |  |  |
|  | 258 | $1.6 \%$ | 10 | $14.2 \%$ | 10 |

## Q12. Support for Sales Tax

 ( $\mathrm{n}=1,208$ )As a test of uninformed support for a ballot measure to fund transportation projects, residents were read only a ballot question summarizing the features of a $1 / 2 \phi$ sales tax. In response total support for the sample of all residents registered at $72.6 \%$ ("Definitely yes" $42.9 \%$, "Probably yes" 29.7\%), with total opposition at 22.4\% ("Definitely no" 14.8\%, "Probably no" $7.5 \%$ ), and $5.0 \%$ undecided (DK/NA). Total support for the sample of likely November 2016 voters was ("Definitely yes" $43.0 \%$, "Probably yes" $26.5 \%$ ), and total opposition was at $26.3 \%$ ("Definitely no" $18.0 \%$, "Probably no" $8.2 \%$ ), with the remaining $4.1 \%$ undecided (DK/NA). There is a solid base of support, slightly above the two-thirds majority requirement. However, when the $2.82 \%$ margin of error is accounted for, support for the November 2016 election cycle could drop to this threshold.

To complete road and highway improvements, improve traffic safety and match federal and state transportation funding for:

- completing and connecting State Routes in Kern County;
- fixing potholes;
- maintaining local roads before they require more costly repairs;
- repairing dangerous locations; and
- providing safe routes to schools;
shall Kern County levy an half-cent sales tax for twenty years, providing $\$ 86$ million dollars annually, that cannot be taken by the State, and requiring independent oversight to ensure all funds are spent locally?

## Q13. Support for Sales Tax Measure if it Freed Funding for Library and Jail ( $\mathrm{n}=1,208$ )

As a follow up to the ballot question asked previously, residents were queried whether they would vote for the $1 / 2$ ¢ sales tax if it freed up funding to pay for library hours and services and enhanced jail staffing. In response total support for the sample of all residents registered at 64.9\% ("Definitely yes" 35.1\%, "Probably yes" 29.8\%), with total opposition at 28.1\% ("Definitely no" 16.4\%, "Probably no" 11.7\%), and 7.0\% undecided (DK/NA). Total support for the sample of likely November 2016 voters was $60.1 \%$ ("Definitely yes" $32.4 \%$, "Probably yes" $27.6 \%$ ), and total opposition was at $34.6 \%$ ("Definitely no" 20.6\%, "Probably no" $14.0 \%$ ), with the remaining $5.3 \%$ undecided (DK/NA). While there is still support for the measure with this argument, when compared to the ballot test in Question 12 support declined.

Would you vote yes or no on this measure if doing so freed up funding to pay for library hours and services, and enhanced jail staffing?

# Q14. Factors to Encourage Transit Use (drive alone only from Q6) (n=943) 

When residents who indicated they drive alone to work or school in response to Question 6 were then asked what would encourage them to use alternative transit modes, consistent with 2015 results the highest scoring response was "Nothing/not interested" at $33.2 \%$. While the current survey results are overall similar to 2015, there were some small shifts. For example, more respondents in 2016 indicated that "Carpool incentives from my employer" ( $18.5 \%$ in 2016 vs. 13.7\% in 2015), "Public transit stop near my house/work" (14.9\% in 2016 vs. $12.9 \%$ in 2015), and "Express bus service" ( $8.9 \%$ in 2016 vs. $5.1 \%$ in 2016) would persuade them. On the other hand, fewer residents said "Higher gas prices" ( $9.3 \%$ in 2016 vs. 13.4\% in 2015) would influence them to change their transportation habits. Further, fewer respondents indicated that nothing would change their transit use or they were not interested than in 2015 ( $33.2 \%$ in 2016 vs. $36.7 \%$ in 2015). A chart outlining the comparative results follows on the next two pages.

## Q14. Factors to Encourage Alternative Transportation (drive alone only from Q6) ( $\mathrm{n}=943$ ) Continued

## Q14. Factors to Encourage Alternative Transportation <br> (drive alone only from Q6) ( $\mathrm{n}=943$ ) Continued

## Q14. Factors to Encourage Alternative Transportation <br> (drive alone only from Q6) Gender Comparisons

When the results are analyzed in terms of gender, men were more likely to indicate there was nothing that would encourage them to use alternative transportation or they were not interested, Women, on the other hand, tended to report that cheaper or discounted transit fares and information about transit and schedules had a higher likelihood of persuading them.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 943 | 490 | 453 |
| Better transit schedule/more buses | 129 | 57 | 72 |
|  | $13.6 \%$ | $11.6 \%$ | $15.9 \%$ |
| Cheaper/discounted transit fares | $18.5 \%$ | 86 | 89 |
|  | 91 | $17.5 \%$ | $19.7 \%$ |
| Higher gas prices | $9.6 \%$ | $7.1 \%$ | 56 |
|  | 84 | 40 | 44 |
| Public transit stop near my house/work | $8.9 \%$ | $8.2 \%$ | $9.7 \%$ |
|  | 87 | 52 | 36 |
|  | $9.3 \%$ | $10.5 \%$ | $7.9 \%$ |
| Other | $14.9 \%$ | 13 | 26 |
|  | 313 | $2.7 \%$ | $5.7 \%$ |
| DK/NA | $33.2 \%$ | $14.1 \%$ | 715.79 |

## Q14. Factors to Encourage Alternative Transportation <br> (drive alone only from Q6) Age Comparisons

The 18-to-24-year-olds were more likely to respond that "Cheaper/discounted transit fares" and "Information about transit/schedules" would make them more likely to use alternative transportation. Residents ages 25 to 34 and 45 to 54 tended report at higher levels that "Carpool incentives from my employer" would encourage them, while the 35-to-44-year-olds were more likely to be influenced by "Higher gas prices." In contrast, residents ages 45 to 84 more frequently gave the response "Nothing/not interested."

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | 18 to 24 | 25 to 34 | 35 to 44 | 45 to 54 | 55 to 59 | 60 to 64 | 65 to 74 | 75 to 84 | 85 and over | DK/NA |
| Total | 943 | 148 | 203 | 171 | 170 | 77 | 53 | 66 | 39 | 9 | 6 |

## Q14. Factors to Encourage Alternative Transportation <br> (drive alone only from Q6) Regional Comparisons

West Kern residents were more likely to indicate they would be encouraged to take an alternative transportation mode if there were higher gas prices. Residents of the Central Valley and Mountains had a higher tendency to report that express bus service would be a motivator for them.

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| Total | 943 | 36 | 743 | 62 | 101 |

|  | 1.0 | 35 | 2 | 2 |  |

## Q15. Importance of Public Transportation, Carpooling and Alternatives to Future ( $\mathrm{n}=1,101$ )

In the final question of the survey, residents were asked to rate the importance of providing public transportation, carpooling and other alternatives to driving alone for improving the future quality of Kern County. The current survey results are similar to 2015, but did show a noticeable increase in the number of respondents who provided a rating of " 3 " (29.4\% in 2016 vs. $24.9 \%$ in 2015). As in the past, nearly seven out of ten residents reported that they felt this was important, with nearly two in five residents indicated this concept was "Extremely important." There was also a slight decrease in those who gave the response " 2. . On the other hand, about one in eight residents rated this issue as unimportant.

# Q15. Importance of Public Transportation, Carpooling and Alternatives to Future 

 Gender ComparisonsWomen were more likely to consider this issue "4 Extremely important," whereas men had a tendency to more frequently give this issue a rating of " 2 ."

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Total | 1101 | 543 | 558 |
| $\mathbf{1}$ | 53 | 25 | 28 |
|  | $4.8 \%$ | $4.6 \%$ | $5.0 \%$ |

Appendix B: Detailed Methodology

## Survey Parameters

The respondents were selected using a random sample of voter file numbers, and a supplemental list of Hispanic surname residents. Interviewers first asked potential respondents a series of questions referred to as "Screeners." These questions were used to ensure that the person lived in Kern County and was at least 18 years of age. Additionally, in order to ensure that the sample was representative of the ethnicity of the County population, 126 interviews were conducted in Spanish.
Overall, 1,208 residents in Kern County completed the survey, representing the population of approximately 602,435 adult residents. The study parameters resulted in a margin of error of plus or minus 2.82 percent. Interviews were conducted from April 5 through April 18, 2016, and the average interview time was 22 minutes. Interviews were conducted in either Spanish ( $\mathrm{n}=$ 126) or English ( $n=1,082$ ), depending on the preference of the resident who was surveyed.

In order to allow segmentation of the results by region of Kern County, three areas of the County were over-sampled. During the study, oversamples were completed in each of the following regions - West Kern ( $n=137$ ), Mountains ( $n=211$ ), and East Kern ( $n=206$ ), and the remaining interviews were completed in the Central Valley region ( $n=654$ ). For the overall results presented in this report, the over-sampling was corrected by statistically weighting the data by region.

## Sample and Weighting

Once collected, the sample of respondents was compared with the actual adult population of Kern County (based on 2014 ACS) to examine possible differences between the demographics of the sample of respondents and the actual County population. The data were weighted to correct differences, and the results presented are representative of the adult population of Kern County in terms of gender, age, ethnicity and region of residence.

## Questionnaire Methodology

To avoid the problem of systematic position bias, where the order in which a series of questions is asked systematically influences the answers, several questions in the survey were randomized such that the respondents were not consistently asked the questions in the same order. The series of items in Questions 3,4 and 5 were randomized to avoid such position bias.
Questions 3, 4, 14 and $G$ allowed the residents surveyed to mention multiple responses. For this reason, the response percentages sum to more than 100, and these represent the percent of residents who mentioned a particular response, rather than the percent of total responses.

## Margin of Error I

Because a survey typically involves a limited number of people who are part of a larger population group, by mere chance alone there will almost always be some differences between a sample and the population from which it was drawn. These differences are known as "sampling error" and they are expected to occur regardless of how scientifically the sample has been selected. The advantage of a scientific sample is that we are able to calculate the sampling error. Sampling error is determined by four factors: the population size, the sample size, a confidence level, and the dispersion of responses.

For example, the following table shows the possible sampling variation that applies to a percent result reported from a probability type sample. Because the sample of 1,208 adult residents age 18 or older was drawn from the estimated population of Kern County of approximately 602,435 adult residents, one can be $95 \%$ confident that the margin of error due to sampling will not vary, plus or minus, by more than the indicated number of percent points from the result that would have been obtained if the interviews had been conducted with all persons in the universe. As the table on the following page indicates, the margin of error for all aggregate responses is between 1.69 and $2.82 \%$ for the survey.
This means that, for a given question with dichotomous response options (e.g., Yes/No) answered by 1,208 respondents, one can be $95 \%$ confident that the difference between the percent breakdowns of the sample and those of the total population is no greater than $2.82 \%$. The percent margin of error applies to both sides of the answer, so that for a question in which $50 \%$ of respondents said yes, one can be $95 \%$ confident that the actual percent of the population that would say yes is between $47 \%$ ( 50 minus 2.8 ) and $53 \%$ ( 50 plus 2.8).
The margin of error for a given question also depends on the distribution of responses to the question. The $2.82 \%$ refers to dichotomous questions where opinions are evenly split in the sample with 50\% of respondents saying yes and 50\% saying no. If that same question were to receive a response in which $10 \%$ of the respondents say yes and $90 \%$ say no, then the margin of error would be no greater than plus or minus $1.69 \%$. As the number of respondents in a particular subgroup (e.g., age) is smaller than the number of total respondents, the margin of error associated with estimating a given subgroup's response will be higher. Due to the high margin of error, Godbe Research cautions against generalizing the results for subgroups that are comprised of 25 or fewer respondents.

| $n$ | Distribution of Responses |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $90 \% / 10 \%$ | $80 \% / 20 \%$ | $70 \% / 30 \%$ | $60 \% / 40 \%$ | $50 \% / 50 \%$ |
| 1208 | $1.69 \%$ | $2.25 \%$ | $2.58 \%$ | $2.76 \%$ | $2.82 \%$ |
| 900 | $1.96 \%$ | $2.61 \%$ | $2.99 \%$ | $3.20 \%$ | $3.26 \%$ |
| 800 | $2.08 \%$ | $2.77 \%$ | $3.17 \%$ | $3.39 \%$ | $3.46 \%$ |
| 600 | $2.40 \%$ | $3.20 \%$ | $3.67 \%$ | $3.92 \%$ | $4.00 \%$ |
| 500 | $2.63 \%$ | $3.50 \%$ | $4.02 \%$ | $4.29 \%$ | $4.38 \%$ |
| 400 | $2.94 \%$ | $3.92 \%$ | $4.49 \%$ | $4.80 \%$ | $4.90 \%$ |
| 300 | $3.39 \%$ | $4.53 \%$ | $5.18 \%$ | $5.54 \%$ | $5.66 \%$ |
| 200 | $4.16 \%$ | $5.54 \%$ | $6.35 \%$ | $6.79 \%$ | $6.93 \%$ |

The questions discussed and analyzed in this report comprise a subset of various crosstabulation tables available for each question. Only those subgroups that are of particular interest or that illustrate particular insights are included in the discussion. Should readers wish to conduct a closer analysis of subgroups for a given question, the complete breakdowns appear in Appendix E. These crosstabulation tables provide detailed information on the responses to each question by demographic and behavioral groups that were assessed in the survey. A typical crosstabulation table is shown here.

A short description of the item appears on the left-hand side of the table. The item sample size ( $n=1,201$ ) is presented in the first column of data under "Total."
The results to each possible answer choice of all respondents are presented in the first column of data under "Total." The aggregate number of respondents in each answer category is presented as a whole number, and the percent of the entire sample that this number represents is just below the whole number. In this example, among the total respondents, 472 respondents reported their "very satisfied" response, and this number of respondents equals $39.3 \%$ of the total sample size of 1,201 . Next to the "Total" column are the other columns representing responses from the male and female respondents. The data from these columns are read in exactly the same fashion as the data in the "Total" column, although each group makes up a smaller percent of the entire sample.

| EXAMPLE OF DATA CROSSTABULATION TABLE |  | Respondent's Gender |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Male | Female |
| 1. Generally speaking are you satisfied or dissatisfied with the quality of life in your city or town? | Very satisfied | 1201 | 619 | 582 |
|  |  | 472 | 233 | 239 |
|  |  | 39.3\% | 37.6\% | 41.1\% |
|  | Somewhat satisfied | 505 | 276 | 229 |
|  |  | 42.1\% | 44.7\% | 39.4\% |
|  | Somewhat dissatisfied | 130 | 63 | 67 |
|  |  | 10.8\% | 10.1\% | 11.5\% |
|  | Very dissatisfied | 87 | 45 | 42 |
|  |  | 7.3\% | 7.2\% | 7.3\% |
|  | DK/NA | 7 | 2 | 5 |
|  |  | .6\% | 4\% | .8\% |

To test whether or not the differences found in percent results among subgroups are likely due to actual differences in opinions or behaviors - rather than the results of chance due to the random nature of the sampling design - a "z-test" was performed. In the headings of each column are labels, "A," "B," "C," etc. along with a description of the variable. The "z-test" is performed by comparing the percent in each cell with all other cells in the same row within a given variable (within Respondent's Gender in the pictured table, for example).
The results from the "z-test" are displayed in a separate table below the crosstabulation table. If the percent in one cell is statistically different from the percent in another, the column label will be displayed in the cell from which it varies significantly. For instance, in the adjacent table, a significantly higher percent of men (44.7\%) reported "somewhat satisfied" than women (39.4\%). Hence, the letter "B," which stands women, appears under Column "A," which stands for men. The letters in the table indicate the differences where one can be $95 \%$ confident that the results are due to actual differences in opinions or behaviors reported by subgroups of respondents.

It is important to note that the percent difference among subgroups is just one piece in the equation to determine whether or not two percentage figures are significantly different from each other. The variance and sample size associated with each data point is integral to determining significance. Therefore, two calculations may be different from each other, yet the difference may not be statistically significant according to the " $z$ " statistic.

| EXAMPLE OF DATA CROSSTABULATION TABLE |  | Respondent's Gender |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Male | Female |
| 1. Generally speaking are you satisfied or dissatisfied with the quality of life in your city or town? | Total | 1201 | 619 | 582 |
|  | Very satisfied | 472 | 233 | 239 |
|  |  | 39.3\% | 37.6\% | 41.1\% |
|  | Somewhat satisfied | 505 | 276 | 229 |
|  |  | 42.1\% | 44.7\% | 39.4\% |
|  | Somewhat dissatisfied | 130 | 63 | 67 |
|  |  | 10.8\% | 10.1\% | 11.5\% |
|  | Very dissatisfied | 87 | 45 | 42 |
|  |  | 7.3\% | 7.2\% | 7.3\% |
|  | DK/NA | 7 | 2 | 5 |

|  | (A) | (B) |  |
| 1. Generally speaking <br> are you satisfied or <br> dissatisfied with the <br> quality of life in your city <br> or town? | Very satisfied |  |  |
|  | Somewhat <br> satisfied | B |  |
|  | Somewhat <br> dissatisfied |  |  |
|  | Very <br> dissatisfied |  |  |
|  | DK/NA |  |  |

## Understanding a Mean

In addition to the analysis of the percent of the responses, some results are discussed with respect to an average score. To derive the overall importance of an issue, Q5 for example, a number value was assigned to each response category - in this case,

The number values that correspond to respondents' answers were then averaged to produce a final score that reflects the overall importance of an issue. The resulting mean score makes the interpretation of the data considerably easier.
In the crosstabulation tables for Questions 5 and 15 of the survey, the reader will find mean scores. These mean scores represent the average response of each group. The table to the right shows the scales for each corresponding question. Responses of "DK/NA" were not included in the calculations of the means for any question.

| Question | Measure | Scale | Values |
| :---: | :--- | :--- | :--- |
|  |  |  | $+4.0=$ "Extremely Important" |
|  |  |  | +3.0 |
| Q5 and | Importance | +4 to 0 | +2.0 |
| Q15 | Ratings |  | +1.0 |
|  |  |  | $0.0=$ "Not Important" |

## Means Comparisons

A typical crosstabulation table of mean scores is shown in the adjacent table. All subgroups of interest concerning questions 5 and 15 are included in Appendix E.

The aggregate mean score for each item in the question series is presented in the first column of the data under "Total." For example, among all the survey respondents, the feature, "Providing programs to improve energy efficiency," earned a mean score of 1.3. Next to the "Total" column are other columns representing the mean scores assigned by the respondents grouped by Gender.
The data from these columns are read in the same fashion as the data in the "Total" column. To test whether two mean scores are statistically different, a "t-test" is performed. As in the case of the "z-test" for percentage figures, a statistically significant result is indicated by the letter representing the data column.

| EXAMPLE OF DATA FOR MEANS COMPARISON | Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Providing programs to improve energy <br> efficiency | 1.3 | 1.4 | 1.2 |
| Providing programs to conserve natural <br> resources | 1.1 | 1.1 | 1.1 |
| Providing incentives for residents, businesses, <br> schools and churches to use solar and <br> windpower | .9 | .8 | .9 |

| EXAMPLE OF DATA FOR T-TEST | Gender |  |
| :--- | :---: | :---: |
|  | Male | Female |
|  | $(\mathrm{A})$ | (B) |
| Providing programs to improve energy <br> efficiency | B |  |
| Providing programs to conserve natural <br> resources |  |  |
| Providing incentives for residents, <br> businesses, schools and churches to use <br> solar and windpower |  |  |

## METHODOLOGY

## Sample Universe:

602,435 Adults 18+
-The respondents were selected using random sample of voter file numbers, matched
to update cell phone numbers and email addresses, and a listed sample of Hispanic residents,
which insures that all residents are represented.
Sample Size:

- $\mathrm{n}=1,208$

In order to allow segmentation of the results by region of Kern County, the areas of
the County were sampled as follows:
West Kern, $\mathrm{n}=137$

- Central Valley, $\mathrm{n}=65$
- Mountains, $\mathrm{n}=211$
- East Kern, n=206

Weighting:
Data is weighted to the 2014 American Community Survey (ACS) for gender, age and
ethnicity, and weighted to the 2010 Census data for region.
Marin of Error
$- \pm 2.82 \%$
Data Collection: Phone Interviewing, $\mathrm{n}=1,005$; Online, $\mathrm{n}=203$
Languages: English, n=1,082; Spanish, $\mathrm{n}=126$ based on respondent preference
Interview Dates: April 5 to April 18, 201
Phone Interview Length: 22 -minutes

OVERALL SATISFACTION

|  |  | \% | $\mathrm{n}=$ | Mean or <br> Imp <br> $(3+4)$ |

CLIENT EMAIL SETUP INFORMATION
Step 1
The Kern Council of Governments will need to create a new email address for use by Godbe Research to send out email invitations. Unless already in use, this new email address Research to
should be:
executive.director@kerncog.org.
Step 2
After the email has been set up, have your IT Department forward all of the emails sent to the new account to: surveys.gra@gmail.com. We will handle any tech support questions sent to this account and forward any substantive emails that may require a response from a agency representative.

## Step 3

Provide Godbe Research any email lists for matching with the voter file. The data needs to include separate fields for first name, last name, street address, and email address
include separate fields for first name, last name, street address, and email address. excel files should be:

## Client Check List

## $\square$ Set up email address

$\square$ Auto forward all email from new account to surveys.gra@gmail.com.
$\square$ Notify Godbe Research on completion of above so the email can be tested.
$\square$ Send email list as discussed to Godbe Research.

GENERAL EMAIL INVITATION
From: executive.director@kerncog.org
Reply to: executive.director@kerncog.org
Subject: Participate in this important study about our community
Dear [insert name],
The Kern Council of Governments has commissioned GRA and McGuire Research, independent research firms, to conduct research on important issues in your area.

Your individual responses are entirely confidential and will be used for research purposes only. Your data will not be sold or provided to anyone. You will not be approached for any other reason - we are only interested in your opinions.

For the individual named above, you can access the survey by simply clicking on the link below. If your email does not support links, cut and paste the entire link into your browser.
<survey link with unique voter file id>
We ask that you please complete the survey on or before $\qquad$ 2016, after which it will be closed.

Thank you in advance for your participation.
Regards,
Ahron Hakimi
Executive Director
Kern Council of Governments

Technical Issues: If you have technical issues or questions with the survey link, password or completing the survey form please contact Technical Assistance (pwood@mcguireresearch.com).
Questions about the District or this Survey: If you have questions about the Kern Council of Governments, or the purpose of this survey please contact:
executive.director@kerncog.org

Note: Email addresses for this survey were obtained from public records at the Registrar of Voters in Kern County. If you no longer wish to receive invitations or reminders for this research please click HERE to unsubscribe.

INTRODUCTION \& SCREENERS

## [ONLINE INTRODUCTION]

Thank you for your interest in taking our survey to help understand issues in Kern County. All of your answers to the survey will be kept strictly anonymous and confidential.

## Survey Instructions:

Once you have answered all the questions on a page, click the "Next" button in the lower-left corner of the screen to continue. If you have any technical difficulties with the survey, please email: Technical Assistance.

## [PHONE INTERVIEW]

Hello, May I speak with $\qquad$ ? Hello, my name is $\qquad$ and I'm calling on behalf of GRA, a public opinion research firm. We're conducting a survey concerning some important issues in Kern County, and we would like to hear your opinions, we really
appreciate your time. [VOTER; ASK FOR SPECIFIC PERSON, IF NOT AVAILABLE
SCHEDULE CALL BACK. LISTED: ASK FOR SPECIFIC PERSON IF NOT AVAILABLE
ASK ANOTHER ADULT 18+ IN HOUSEHOLD]
[IF NEEDED]: This is a study about issues of importance in your community. It is a survey only and I am not selling anything.
[IF THE PERSON ASKS WHY YOU ONLY WANT TO TALK TO THE INDIVIDUAL LISTED ON THE SAMPLE, OR ASKS IF THEY ARE ABLE TO PARTICIPATE INSTEAD OF THE NDIVIDUAL, THEN SAY: "I'm sorry, but for statistical purposes this survey must only be completed by this particular individual."]
[IF THE INDIVIDUAL INDICATES THAT THEY ARE AN ELECTED OFFICIAL, THANK THEM FOR THEIR TIME, POLITELY EXPLAIN THAT THE FOCUS OF THIS SURVEY IS ON THE PUBLIC'S PERCEPTION OF ISSUES, AND TERMINATE THE INTERVIEW.]
[IF THE INDIVIDUAL SAYS THEY ARE ON THE NATIONAL DO NOT CALL LIST,
RESPOND BASED ON THE GUIDELINES FROM THE MARKETING RESEARCH
ASSOCIATION. FOR EXAMPLE, IF THE INDIVIDUAL SAYS: "There's a law that says you can't call me," RESPOND WITH:' "Most types of opinion research studies are exempt unde the law that congress passed. That law was passed to regulate the activities of the
telemarketing industry. This is a legitimate research call. Your opinions count!"].
Before we get started, l'd like to verify that you are eligible to complete the survey
i. But first, I need to know if I have reached you on a cell phone, and if so, are you in a place where you can talk safely without endangering yourself or others?

|  |
| :---: |
| Yes, cell but cannot talk safely ------------------------2[2] 2 [CALL BACK LATE |
| No, not on cell -------------------------------------------3 |
| DON'T READ] |

OVERALL SATISFACTION
To begin, what is your overall opinion of living in your city or town?

1. Generally speaking are you satisfied or dissatisfied with the quality of life in your city or town?
[PHONE: GET ANSWER, THEN ASK:] Is that very (satisfied/dissatisfied) or somewhat (satisfied/dissatisfied)?

2. Looking ahead to the next 20 years, do you think the quality of life in your city or town will stay about the same as today, or will it be better or worse?
[PHONE: ASK IF REPLY IS "BETTER" OR "WORSE": Is that much (better/worse) or somewhat (better/worse)?

12. To complete road and highway improvements, improve traffic safety and match federal and state transportation funding for:

- completing and connecting State Routes in Kern County;
- fixing potholes;
- maintaining local roads before they require more costly repairs;
- repairing dangerous locations; and
- providing safe routes to schools;
shall Kern County levy an half-cent sales tax for twenty years, providing $\$ 86$ million dollars annually, that cannot be taken by the State, and requiring independent oversight to ensure all funds are spent locally? [75 words; Kern County counts as 1 word]

## Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
d.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportion
tests.

|  | One year to less than five years |  |  |  | a |  |
|  | Five years to less than ten years <br> 10 years or more |  |  |  | A |  |

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category
win the smaller column proportion appears under the category with the larger column proportion.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
correction. c. Cell counts of some cate
column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b, }}$ c

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with
the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests with significance level 0.05 . For each signiticant pair, the key
with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction a.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

|  | Traffic congestion |  |
|  | Youth programs (education and recreation for children/teens) |  |
|  | Other <br> DK/NA |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with ihe larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction b.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance lever
0.05. For each significant pair, the key of the category with 0.05. For each signiticant pair, the key of the category with
the smaller column proportion appears under the category
with the larger colun prion the smaller column proportion app
with the larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a
row of each innermost subtable using the Bonferroni row of each innermost subtable using the Bonferron
correction.
b. Cell counts of some categories are not integers. They
were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b, }}$

Godbe Research //Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests. tests.

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research //Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b, }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the
category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the
category with the smaller column proportion appears under the category with the larger column proportion
This
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing
column column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b, }} \mathbf{c}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\mathrm{c}, \mathrm{d}}$

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller
column proportion appears under the category with the larger column proportion Results are based on two-sided tests with significance lever 0.05. For each signific
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b.This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. d.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller This category is not used in comparisons because it colum proportion is equa
is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b, }}$

Godbe Research //Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\mathrm{b}, \mathrm{c}}$

Results are based on two-sided tests with significance level 0.05 . For each significant pait
smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the eey of the
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the
Bonferroni correction

Bonterroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests. tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with
larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers
before performing column proportions tests.

Godbe Research //Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\mathrm{b}, \mathrm{c}}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions, ${ }^{\mathrm{b}, \mathrm{c}}$

Godbe Research // Kern coG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significan
pair, the key of the category with the smaller column proportion appears under the
pair, the key of the category with the smaller
category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to a.This catego
zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost
subtable using subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest
integers before performing column proportions tests.

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions, ${ }^{\text {b, }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\mathrm{b}, \mathrm{c}}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b, }}$ c

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the
category with the smaller column proportion appears under the category with the larger column proportion
category with the smaller column proportion appears under the category with the larger column proportion
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research // Kern COG Community Survey // Crosstabs 05-13-16
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with
the smaller column proportion appears under the category with the larger column proportion.
appears u surn
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferron
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category
Results are based on two-sided tests with significance level 0.05. For each significant pair, the key
with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller courn proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportion
test.

Comparisons of Column Proportions, ${ }^{\text {b, }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {a,b }}$

Results are based on wo-sided tests with
significance level 0.05 . For each significant par
the
the key of the category with the smaller rolumn
proportion appears under the category with the
proportion appears under
larger column proportion.
a. Tests are adjusted for all pairwise comparisons a. ithin arow of each innermost subtable using the
Bonferroni correction.
b.Cell counts of some categories are not
integers. They were rounded to the neare integers before performing column proportions

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller der the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

|  | Other |  |  |  |  |
|  | DK/NA |  |  |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with
the smaller column proportion appears under the category with the larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferron
correction.
b.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column broportions tests.

Results are based on two-sided tests with significance level 0.05. For each significa
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, thi
the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each signific
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05 For each significant pair, the key of the category with the smaller
column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

| quality of life in Kern |  |  |  |

Results are based on two-sided tests with significance level 0.05. For each
significant pair, the key of the category with the smaller column proportion
signiticant pair, the key of the category with the smalier column
appears under the category with the larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each
innermost subtable using the Bonferroni correction.
b.Cell counts of some categories are not integers. They were rounded to
the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the
key of the category with the smaller column proportion appears under the category with the larger key of the category
column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using
the Bonferoni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers
before before performing column proportions tests.

Comparisons of Column Proportions, ${ }^{\text {c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with
the smaller column proportion appears under the category with the larger column proportion.
тия
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column
proportions tests.

Comparisons of Column Proportions ${ }^{\text {b, }}$

Results are based on two-sided tests with significance level 0.05 . For each significant pair,
the smaller column proportion appears under the category with the larger column proportion
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferron
correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category
with the smaller column proportion appears under the category with the larger column proportion.
Toctc are
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
corretion correction.
b.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing
column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

|  | $\$ 25,000$ to $\$ 49,999$ |  |  |  |  |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the
category with the smaller column proportion appears under the category with the larger column proportion
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
c. Cell couns of some categories are not integers. They were rounded to the nearest integers before performing column proportions test.

Results are based on two-sided tests assuming equal variances with significance level 0.05 . For each significant pair, the key of the smaller category appears under the category with larger mean
a.This category is not used in comparisons because the sum of case weights is less than two
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons.

assuming equal variances with significanc Ievel 0.05 . For each signesificant sair, the key
let key
of the smaller category appears under the of the smaller category appears under the
category with larger mean.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost
subtable using the Bonferroni correction subtable using the Bonferroni correction.
b.Cell counts in some subtables are not
integers. They were rounded to the neares integers. They were rounded to the
integers before performing pairwise
comparisons.
