

Kern Council of Governments: 2017 Community Survey

May 2017

The Kern Council of Governments commissioned Godbe Research to conduct a telephone survey of residents of Kern County with the following research objectives:
> Gauge residents' overall opinion of current and future quality of life in their city or town;
> Survey the importance of specific issues related to future quality of life in the County;
> Understand the daily commute behavior of the average resident;
> Determine housing preferences; and
> Identify any differences in opinion due to demographic and/or behavioral characteristics.

## Methodology Overview

> Data Collection
> Universe
> Fielding Dates
> Interview Length
> Sample Size
> Margin of Error

Telephone and online interviewing
609,827 adult (age 18 or older) residents of Kern County

January 28 through February 12, 2017
22 minutes (Phone)
1,328 (Email/online=254; Cell=314;
Landline=707; Text/online=53)
84 interviews were conducted in Spanish
$\pm 2.69 \%$

Executive Summary

## Executive Summary I

$>$ The survey showed the third highest level of satisfaction with the quality of life among Kern County residents measured by any survey from 2008 to 2017, with 84 percent indicating they are satisfied. Statistically, there is no difference among the respondents since 2012. Further, results continue the trend, that the opinion of the quality of life has exceed 80 percent in each year after 2011.
$>$ Looking ahead to the next 20 years, 38 percent of the residents surveyed think the quality of life in their city or town will be "much better" or "somewhat better". This is numerically lower than 2016, but statistically equivalent. Thirty percent think it will "stay about the same," and 27 percent think it will be "somewhat worse" or "much worse."
> In an open-ended format, the "small town atmosphere" continues to be the thing that respondents cited that they liked most about where they live ( $41 \%$ ), and "sense of community" is second ( $25 \%$ ), "cost of living" is third (24\%). Contrastingly, "air quality" remains the thing they liked least about their city or town (32\%) and followed by the "crime rate", which is almost the same (30\%).

## Executive Summary II

> The 2017 survey assessed the importance of 20 issues in improving the future quality of life in Kern County. The top rated issues for 2017 were:

- Preserving water supply (3.67, on a scale of 4 to 0 )
- Improving the quality of public education (3.60)
- Improving crime prevention and gang prevention programs (3.55)
- Improving air quality (3.46)
- Creating more high paying jobs (3.45)
- Improving water quality (3.43)
- Maintaining local streets and roads (3.41)
$>$ Slightly lower than in 2016, but not statistically significant, the results show just slightly less than 3 out of 4 residents typically drive alone in their commute to work or school (74\%). Twenty-four percent indicated that carpooling was their secondary mode choice, numerically, but not statistically higher than 2016.

## Executive Summary III

$>$ Thirteen percent of respondents rated traffic flow as "Excellent". Forty-three percent of respondents rated traffic flow as "Good", while 34 percent raked it as "Fair" and nine percent said it was "Poor".
> Seventy-three percent of residents reported a commute of 40 minutes or less in 2017, compared to 68 percent in 2016 and 66 percent in 2015.
> Sixty-one percent of residents reported a commute of 20 miles or less in 2017, compared to 60 percent in 2016 and 62 percent in 2015.
> Respondents who drive alone were also asked if they would take an alternative if it were available. Thirty-three percent indicated they would continue driving alone, compared to 27 percent in 2016, 32 percent in 2015, and 30 percent in 2014. Just 25 percent also said they would car or vanpool.
> Just seven percent of respondents indicated they had used a freeway call box in the last 12 months. Those 60 years or older we're only slightly more likely to have used a call box that those 59 or less.

## Executive Summary IV

> The largest plurality of respondents indicated they currently live in a singlefamily home with a large yard (47\%), while 39 percent indicated they reside in a single-family home with a small yard, 10 percent live in an apartment, and three percent live in a townhouse or condo.
> The largest majority of respondents (80\%, definitely or probably) indicated they would prefer a single-family home with a large yard. Secondarily, 77 percent chose a single-family home with a small yard. While 43 percent indicated they would prefer a townhome or condo, and only 21 percent would prefer a condo in a mixed-use building.

Key Findings

# Q1. Satisfaction with Quality of Life ( $\mathrm{n}=1,328$ ) 

To begin, the first question of the survey asked residents to rate their level of satisfaction with the quality of life in their city or town. While, the 2017 survey results show a small decrease in the "Very satisfied" response and corresponding slight increase in "Somewhat satisfied" response when compared to 2016, the overwhelming majority of Kern County residents continue to be satisfied. Consistent with previous results, more than four out of five residents said they are satisfied with the quality of life, with only one in six residents indicating some level of dissatisfaction. Less than one percent did not offer an opinion or declined to answer the question (DK/NA). The chart on the following page compares the relative satisfaction with quality of life for 2017 at 83.5\%, compared with survey results from 2016 (85.1\%), 2015 (82.0\%), 2014 (84.3\%), 2012 (81\%), 2010 (78\%), and 2008 (79\%).

Q1. Satisfaction with Quality of Life ( $\mathrm{n}=1,328$ ) Continued

## Q1. Satisfaction with Quality of Life Gender Comparisons

When viewed in terms of gender, the data reveals that men were more likely to say they were "Very satisfied, " while women and those indicating a gender of "Other" had a higher tendency to indicate they were "Somewhat dissatisfied.".

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1328 | 678 | 647 | 3 |
| Very satisfied | 495 | 272 | 223 | 0 |
|  | $37.3 \%$ | $40.2 \%$ | $34.5 \%$ | $.0 \%$ |
| Somewhat satisfied | 614 | 310 | 303 | 1 |
|  | $46.2 \%$ | $45.7 \%$ | $46.7 \%$ | $49.9 \%$ |
| Somewhat dissatisfied | 141 | 56 | 83 | 1 |
|  | $10.6 \%$ | $8.3 \%$ | $12.8 \%$ | $50.1 \%$ |
| Very dissatisfied | 77 | 38 | 39 | 0 |
|  | $5.8 \%$ | $5.6 \%$ | $6.0 \%$ | $.0 \%$ |
| DK/NA | 1 | 1 | 0 | 0 |
|  | $.1 \%$ | $.2 \%$ | $.0 \%$ | $.0 \%$ |

## Q1. Satisfaction with Quality of Life Age Comparisons

When analyzed in terms of age, residents ages 55 to 59 were more likely to say they are "Very dissatisfied," while those ages 85 and older had a higher tendency to respond "Very satisfied."

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q1. Satisfaction with Quality of Life Regional Comparisons

When viewed in terms of region, residents of the Mountains region were more likely to say they were "Very satisfied" with the quality of life, whereas residents of East Kern had a higher tendency to report they were "Very dissatisfied."

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central <br> Valley | Mountains | East Kern |
| Total | 1328 | 71 | 1043 | 92 | 122 |
| Very satisfied | 495 | 30 | 395 | 40 | 31 |
|  | $37.3 \%$ | $42.0 \%$ | $37.8 \%$ | $43.1 \%$ | $25.7 \%$ |
| Somewhat satisfied | 614 | 29 | 486 | 43 | 56 |
|  | $46.2 \%$ | $40.4 \%$ | $46.6 \%$ | $46.8 \%$ | $46.2 \%$ |
| Somewhat dissatisfied | 141 | 11 | 105 | 5 | 20 |
|  | $10.6 \%$ | $15.8 \%$ | $10.0 \%$ | $5.6 \%$ | $16.1 \%$ |
| Very dissatisfied | 77 | 1 | 57 | 4 | 15 |
|  | $5.8 \%$ | $1.8 \%$ | $5.5 \%$ | $4.5 \%$ | $12.0 \%$ |
| DK/NA | 1 | 0 | 1 | 0 | 0 |
|  | $.1 \%$ | $.0 \%$ | $.1 \%$ | $.0 \%$ | $.0 \%$ |

# Q2. Outlook on Future Quality of Life ( $\mathrm{n}=1,328$ ) 

The respondents were then asked to predict whether they thought the quality of life in their city or town would become better or worse over the next 20 years, or if it would stay about the same. The 2017 survey data reveal a slight decrease in those who responded "Much better" when compared to 2016 (12.8\% in 2017 vs. 17.4\% in 2016). However, $38.3 \%$ of residents indicated the quality of life would be at least "Somewhat better," compared with $41.4 \%$ for 2016. In contrast, $26.9 \%$ of residents predicted life will be "Much worse" or "Somewhat worse," compared with $26.7 \%$ in 2016. Similar to previous results, $5.4 \%$ did not render an opinion (DK/NA).

The chart illustrating these results is on the following page.

Q2. Outlook on Future Quality of Life $(1,328)$ Continued

## Q2. Outlook on Future Quality of Life Gender Comparisons

Men had a higher tendency to indicate their outlook on future quality of life in Kern County would be "Much better."

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1328 | 678 | 647 | 3 |
| Much better | 170 | 100 | 70 | 0 |
|  | $12.8 \%$ | $14.8 \%$ | $10.8 \%$ | $.0 \%$ |
| Somewhat better | 339 | 171 | 166 | 1 |
|  | $25.5 \%$ | $25.2 \%$ | $25.7 \%$ | $49.9 \%$ |
| Stay about the same | 391 | 184 | 206 | 1 |
|  | $29.5 \%$ | $27.1 \%$ | $31.8 \%$ | $50.1 \%$ |
| Somewhat worse | 230 | 105 | 126 | 0 |
|  | $17.3 \%$ | $15.4 \%$ | $19.4 \%$ | $.0 \%$ |
| Much worse | 127 | 74 | 53 | 0 |
|  | $9.6 \%$ | $11.0 \%$ | $8.2 \%$ | $.0 \%$ |
| DK/NA | 71 | 44 | 27 | 0 |
|  | $5.4 \%$ | $6.5 \%$ | $4.2 \%$ | $.0 \%$ |

## Q2. Outlook on Future Quality of Life Age Comparisons

In terms of comparison among age groups, residents ages 25 to 34 were more likely to report that they felt the quality of life would be "Much better" in the next twenty years. Residents ages 60 to 74 had a higher tendency to say they anticipated the future to be "Somewhat worse," while those ages 25 to 84 were more likely to feel the future quality of life would be "Much worse."

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q2. Outlook on Future Quality of Life

 Ethnicity ComparisonsHispanic or Latino residents were most optimistic, with a higher tendency to indicate they feel the future quality of life would be "Much better" or "Somewhat better," and Asian residents were also more likely to say that the future quality of life would be "Somewhat better." However, African-American or Black and Caucasian or White residents tended to report at higher frequency that they anticipated the future would be "Much worse."

|  | Ethnic Group |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

# Q3. Most Liked Features of City or Town ( $\mathrm{n}=1,328$ ) 

Next, residents were asked what they most liked about their city or town in an open-end format with multiple responses accepted. The most frequent response was "Small-town atmosphere" at $41.2 \%$. The following tier of responses included "Sense of community" at 24.6\%, "Cost of living" at 23.9\%, "Location" at 23.8\%, and "Cost of housing" at 20.7\%. The third tier of responses included "Weather and climate," "Safe neighborhoods / communities," "Natural resources," and "Farming and agriculture." All other features garnered less than ten percent mentions.

The data is illustrated on the following page.

# Q4. Least Liked Features of City or Town ( $\mathrm{n}=1,328$ ) 

As in the previous question, the residents were asked in an open-end format with multiple responses allowed, to indicate what they like least about their city or town. The most frequently given response was "Air quality" at $32.0 \%$, followed by "Crime rate" at $30.0 \%$. The next tier of responses were "Gang violence" at 20.9\%, "Job opportunities" at 18.3\%, "Lack of community resources" at 12.3\%, and "Growth and planning" at 10.9\%. All other features garnered less than ten percent mentions

The chart illustrating the results can be found on the following page.

## Q5. Economic Vitality and Equitable Services ( $\mathrm{n}=1,328$ )

Next, the residents were asked to look forward to the next 20 years and rate the importance of specific issues with respect to improving the future quality of life in Kern County. Results are presented on the following pages, and grouped by similar sets of issues. At the end of this section, there are tables showing all of the issues examined in this portion of the survey, segmented by gender, age, region, ethnicity, and household income.

In the first set of issues, Economic Vitality and Equitable Services, two issues reached nearly identical levls of importance as in 2016. Further, the highest rated issue, "Creating more high paying jobs (5A)" (mean score of 3.45) received an "Extremely important" rating by more than $60 \%$ of residents while "Encouraging new businesses to relocate to County (5B)" (mean score of 3.29) garnered an "Extremely important" by more than $50 \%$ of residents.

The data are presented on the following pages for each of the specific issues included in the Economic Vitality and Equitable Services grouping in the form of a summary chart, comparative table, and subgroup comparisons. This format is followed for each of the issue sections.

## Q5. Economic Vitality and Equitable Services ( $\mathrm{n}=1,328$ ) Continued

## Q5. Economic Vitality and Equitable Services Detailed Comparisons

Encouraging new businesses to relocate to the County in order to diversify the local economy (5B)

Promoting economic activities to improve the region's global competitiveness

Providing education and job training to ensure businesses have a strong base of local workers

## Q5. Community Assets and Infrastructure Regional Comparisons

Residents in the Central Valley region were more likely to place importance on "Revitalizing older neighborhoods and business districts that are becoming rundown (5C)," while West Kern and Central Valley residents had a greater tendency to give higher importance ratings to "Creating more affordable housing (5D)."

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5C. Revitalizing older neighborhoods and business districts that <br> are becoming rundown | 3.17 | 3.09 | 3.23 | 2.79 | 3.02 |
| 5D. Creating more affordable housing | 2.93 | 2.79 | 3.03 | 2.26 | 2.64 |

The next section of the survey encompassed Transportation Choices. Residents were asked to rate the importance of issues relating to transportation choices for improving the future quality of life in Kern County. As in the previous sections, the results for the 2016 survey are presented on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

Once again, the results of the current survey are similar to the 2016 survey, with only one of the seven issues garnering a mean score of at least three on a scale of zero to four,."Maintaining local streets and roads (5G)," earned a mean score of 3.41 and an "Extremely Important" rating from more than half of the residents.

Following this issue was "Maintaining and improving sidewalks and bike lanes (5J)" (mean score of 2.97), "Expanding highways (5E)" (mean score of 2.79), "Improving public transportation to other cities (5I)" (mean score of 2.76), "Reducing traffic congestion (5F)" (mean score of 2.68), and "Expanding local bus services $(5 \mathrm{H})$ " (mean score of 2.66). Each of these issues garnered an "Extremely Important" rating of more than three out of ten residents.

The last issue, "Providing public transportation, carpooling, and other alternatives to driving alone (5K)" (mean score of 2.63) achieved an "Extremely Important" rating by nearly 30\% of the residents.

## Q5. Transportation Choices Gender Comparisons

Women were more likely to ascribe higher importance for all the transportation-related issues and services, with the exception of "Expanding highways (5E)" and "Reducing traffic congestion (5F),"

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| 5E. Expanding highways | 2.79 | 2.80 | 2.78 | 1.50 |
| 5F. Reducing traffic congestion | 2.68 | 2.70 | 2.68 | 2.00 |
| 5G. Maintaining local streets and roads | 3.41 | 3.36 | 3.47 | 2.50 |
| 5H. Expanding local bus services | 2.66 | 2.42 | 2.93 | 2.50 |
| 5I. Improving public transportation to other cities | 2.76 | 2.52 | 3.01 | 3.50 |
| 5J. Maintaining and improving sidewalks and bike lanes | 2.97 | 2.84 | 3.12 | 2.00 |
| 5K. Providing public transportation, carpooling, and other alternatives <br> to driving alone | 2.63 | 2.48 | 2.80 | 2.50 |

## Q5. Transportation Choices Age Comparisons

When analyzed in terms of age, the 18-to-34-year-olds tended to place higher importance on "Expanding local bus services $(5 \mathrm{H})$ " and "Maintaining and improving sidewalks and bike lanes (5J)." The youngest residents (ages 18 to 24) had a higher tendency to ascribe higher importance to "Improving public transportation to other cities (5I)" and "Providing public transportation, carpooling, and other alternatives to driving alone (5K)."

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q5. Transportation Choices Regional Comparisons

Residents of the Central Valley regions were more likely to place higher importance on each of the transportation issues tested. Further, the West Kern residents tended to ascribe high importance to "Reducing traffic congestion (5F)," while East Kern residents tended to more frequently indicate greater importance for "Maintaining local streets and roads (5G)." Lastly, West Kern and East Kern residents were both more likely to report higher importance for "Improving public transportation to other cities (5I)."

|  | Zip Code Region |  |  |  |  |
| :--- | :--- | :--- | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| 5E. Expanding highways | 2.79 | 2.47 | 2.88 | 2.32 | 2.54 |
| 5F. Reducing traffic congestion | 2.68 | 2.46 | 2.84 | 2.14 | 1.86 |
| 5G. Maintaining local streets and roads | 3.41 | 3.20 | 3.43 | 3.15 | 3.51 |
| 5H. Expanding local bus services | 2.66 | 2.45 | 2.73 | 2.22 | 2.53 |
| 5I. Improving public transportation to other cities | 2.76 | 2.66 | 2.82 | 2.13 | 2.72 |

| 5K. Providing public transportation, carpooling, and other <br> alternatives to driving alone | 2.63 | 2.53 | 2.70 | 2.20 | 2.42 |

## Q5. Conserve Undeveloped Land and Natural Resources

The following set of issues in the survey concerned conserving undeveloped land and natural resources for improving the future quality of life in Kern County.

As seen in the previous sections, results of the 2017 survey are nearly identical to 2016 results. All four issues achieved a mean score of at least three on a scale of zero to four. The highest scoring issues were "Preserving water supply (5M)" with a mean score of 3.67 and "Improving air quality (5L)" at 3.43, both with "Extremely Important" ratings from more than seven of ten residents. These were followed by "Improving water quality $(5 \mathrm{~N})$ " at 3.43 and "Preserving open spaces, native animal habitats (5O)" at 3.03 , which were rated as "Extremely Important" by more than $60 \%$ and $40 \%$ of residents, respectively.

The results are shown on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

| 5T. Improving the quality of public education | 3.60 | 3.62 | 3.64 | 3.38 | 3.39 |

# Q5. Importance of Specific Issues in Next 20 Years 

The survey assessed the importance of 20 issues related to improving the future quality of life in Kern County, which were tracked with results from previous surveys. While these issues were not grouped when presented to the survey respondent, they have been grouped into the six topic areas: (a) Economic Vitality and Equitable Services; (b) Community Assets and Infrastructure; (c) Transportation Choices; (d) Conserving Undeveloped Land and Natural Resources; (e) Use Compact, Efficient Development Where Appropriate and Provide Variety of Housing Choices; and (f) Services and Public Safety.
> The top seven rated issues, across categories, reflect nearly the same responses as in 2016, albeit in a slightly different order:
" "preserving water supply" (3.67 on a scale of 4 to 0 )

- "improving the quality of public education" (3.60)
- "improving crime prevention and gang prevention programs (3.55)
- "improving air quality" (3.46)
- "creating more high paying jobs" (3.45)
- "improving water quality" (3.43)
" "maintaining local streets and roads" (3.41)

# Q6. Type of Transportation Used Traveling to Work or School <br> ( $\mathrm{n}=1,328$ ) 

Results of the current survey are very similar to the data of 2016. However, there was a slight decrease in those who reported driving alone ( $74.4 \%$ in 2017 vs. $78.1 \%$ in 2016).

The chart illustrating the results follows on the next two pages.

## Q6. Primary Type of Transportation Used Traveling to Work or School ( $n=1,328$ ) Continued

## Q6. Primary Type of Transportation Used Traveling to Work or School

## Gender Comparisons

When the data is examined in terms of gender, men were more likely to indicate they primarily drive alone to work or school. Women tended to indicate more frequently that they use public transit or either work from home or don't work outside the home. Residents who indicated a gender of "Other" were more likely to carpool.

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1328 | 678 | 647 | 3 |

## Q6. Primary Type of Transportation Used Traveling to Work or School Age Comparisons

The youngest (18 to 24) and oldest (85 and older) residents were more likely to use public transit. The 18-to64 -year-olds had a higher tendency to drive alone, while the 60-to-84-year-olds more frequently said that they work from home or don't work outside the home, probably due to a preponderance of retirees in this category.

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q7. Secondary Type of Transportation Used Traveling to Work or School ( $\mathrm{n}=1,191$ )

Next, residents were asked what secondary types of transportation they used for traveling to work or school. As seen in 2016, the most frequently given response was that they carpool at $23.9 \%$, followed by public transit at $11.4 \%$ and walking at $9.3 \%$. All other responses garnered less than six percent mentions,

## Q7. Secondary Type of Transportation Used Traveling to Work or School

## Gender Comparisons

When looking at the data in terms of gender, men were more likely to report using a bike as a secondary transit mode, while women tended to indicate they prefer public transit, taxi, or walking.

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |

## Q7. Secondary Type of Transportation Used Traveling to Work or School Regional Comparisons

In terms of region, East Kern residents were more likely to say they carpool as a secondary transportation mode, while those from West Kern had a higher tendency to say they walk. Residents of the Mountains and East Kern regions were more likely to report they either work from home or do not work outside the home.

|  | Zip Code Region |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central Valley | Mountains | East Kern |
| Total | 1191 | 68 | 928 | 86 | 109 |
| Bike | 62 | 2 | 51 | 4 | 5 |

|  | $3.7 \%$ | 0 | 49 | 2 | 2 |
| DK/NA | 53 | $0.9 \%$ | $2.1 \%$ | $1.8 \%$ |  |

## Q8. Rating of Traffic Flow in City or Town

 ( $\mathrm{n}=1,147$ )Next, residents were asked to rate the flow of traffic in their city or town. In the current survey, there was a small positive rating shift compared to 2016 results. There was a slight increase the number of residents who said "Good" $42.8 \%$ in 2017 (vs. 39.7\% in 2016), and a sizable decrease in the number of residents who indicated a response of "Fair" (34.2\% in 2017 vs. $40.4 \%$ in 2016). Consistent with previous survey results, less than ten percent said traffic flow was "Poor."

## Q8. Rating of Traffic Flow in City or Town Gender Comparisons

Women were more likely to give traffic flow a rating of "Fair."

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1147 | 603 | 541 | 3 |
| Excellent | 153 | 91 | 62 | 0 |
|  | $13.3 \%$ | $15.1 \%$ | $11.5 \%$ | $.0 \%$ |

# Q11. Most Likely Alternative Transportation (drive alone only from Q6) (n=988) 

As a follow up, residents who said they drive alone to work or school in response to Question 6 were asked what type of alternative transportation to driving alone they would choose if it was available in their area. As in previous years, "Carpool or vanpool" was the most popular response given to this question. However, significantly fewer residents mentioned this response in comparison to previous years (17.5\% in 2017 vs. $25.0 \%$ in 2016), and there is a noticeable decline in this response over the past years. In addition, slightly fewer residents indicated they would walk, while more residents gave the response "None of the above." Further, $5.3 \%$ of residents surveyed reported they would use Uber or Lyft as alternative transportation.

The results are illustrated in a chart on the following page.

## Q11. Most Likely Alternative Transportation Gender Comparisons

Women had a greater tendency to report they would use "Traditional bus service" as an alternative transportation means, while men were more likely to give the response "None of the above."

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 988 | 534 | 452 | 1 |
| Walk | 63 | 30 | 33 | 0 |
|  | $6.4 \%$ | $5.6 \%$ | $7.3 \%$ | $.0 \%$ |
| Bicycle | 79 | 50 | 29 | 0 |
|  | $8.0 \%$ | $9.4 \%$ | $6.3 \%$ | $.0 \%$ |
| Carpool or vanpool | 172 | 87 | 86 | 0 |
|  | $17.5 \%$ | $16.3 \%$ | $18.9 \%$ | $.0 \%$ |
| Traditional bus service | 141 | 63 | 76 | 1 |
|  | $14.2 \%$ | $11.8 \%$ | $16.8 \%$ | $100.0 \%$ |
| Uber/Lyft | 52 | 32 | 20 | 0 |
|  | $5.3 \%$ | $6.0 \%$ | $4.5 \%$ | $.0 \%$ |
| Express bus service | 109 | 50 | 59 | 0 |
|  | $11.1 \%$ | $9.4 \%$ | $13.0 \%$ | $.0 \%$ |
| None of the above | 322 | 201 | 122 | 0 |
|  | $32.6 \%$ | $37.5 \%$ | $26.9 \%$ | $.0 \%$ |
| DK/NA | 49 | 21 | 28 | 0 |
|  | $5.0 \%$ | $4.0 \%$ | $6.3 \%$ | $.0 \%$ |

## Q11. Most Likely Alternative Transportation Age Comparisons

GODBE RESEARCH Gain Insight

Residents ages 18 to 24 were more likely to say they bicycle in response to this question, while the 25-to-34-year-olds tended to more frequently give the response "Traditional bus service." The oldest residents (85 and older) had a greater tendency to say they walk as an alternative transportation mode.

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q13. Current Housing Type

As seen in previous years, the most popular housing type was a single-family home with a large yard, followed by a single-family home with a small yard. Response levels for each housing type are largely similar to 2015, but there was a slight increase in those who said they currently live in a single-family home with a small yard and a slight decrease in those who said they live in an apartment.

## Q13. Current Housing Type Gender Comparisons

There were no statistically significant differences in response among genders.

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1328 | 678 | 647 | 3 |
| A single-family home with a small yard | 519 | 278 | 239 | 1 |
|  | $39.1 \%$ | $41.0 \%$ | $36.9 \%$ | $50.1 \%$ |
| A single-family home with a large yard | 618 | 297 | 319 | 1 |
|  | $46.5 \%$ | $43.9 \%$ | $49.3 \%$ | $49.9 \%$ |
| A townhouse or condominium | 38 | 20 | 18 | 0 |
|  | $2.9 \%$ | $3.0 \%$ | $2.8 \%$ | $.0 \%$ |
| condominiums on the upper floors | 1 | 1 | 0 | 0 |
| An apartment | $.1 \%$ | $.1 \%$ | $.0 \%$ | $.0 \%$ |
|  | 133 | 69 | 63 | 0 |
|  | $10.0 \%$ | $10.2 \%$ | $9.8 \%$ | $.0 \%$ |

## Q13. Current Housing Type Age Comparisons

There were no statistically significant differenced in response among age groupings.

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q13. Current Housing Type Length of Residence Comparisons

Examined in terms of length of residence in Kern County, the results reveal that residents who have lived in the County for ten or more years were more likely to state that they live in a single-family home with a large yard. However, residents of the County for one to ten years tended to more frequently report that they live in an apartment.

|  | Years Lived in Kern County |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | <1 year | $\begin{gathered} 1 \text { year to }<5 \\ \text { years } \end{gathered}$ | $\begin{gathered} 5 \text { years to }<10 \\ \text { years } \end{gathered}$ | 10 years or more |

## Q14. Housing Option Preferences Gender Comparisons

In terms of gender, women and those who indicated the gender "Other," were more likely to be open to the townhouse/condominium and apartment housing options. On the other hand, those who indicated the gender "Other" had a higher tendency to report interest in housing in the mixed-use building option. The data continues on the next page.

## Q14. Housing Option Preferences Age Comparisons

In general, the younger residents were more likely to indicate higher levels of interest for a single-family home with a large yard, mixed use buildings, and apartments. On the other hand, older residents tended to express less interest in these housing options, as well as townhouses or condominiums. Older residents tended to also be less enamored with single-family homes with large yards. The data table begins below and continues on the following page.

|  |  | Age |  |  |  |  |  |  |  |  |  |  |

## Q14. Housing Option Preferences Regional Comparisons

In terms of geographical regions, residents of West Kern and Central Valley areas were more likely to indicate a "Probably yes" response to relocating to a townhouse/condominium or apartment. Mountains residents had a greater tendency to say "No" to the townhouse or condominium option, while East Kern residents tended to more frequently give a "Probably yes" response to moving to a single-family home with a large yard. The table of results is continued on the next page.

|  |  | Zip Code Region |  |  |  |  |

## Q14. Housing Option Preferences Home Ownership Comparisons

Homeowners were more likely to give the response "No" to each of housing options, as well as a "Definitely yes" to the single-family home with a large yard option. On the other hand, renters tended to indicate a preference for the single-family home with a large yard, townhouse/condominium, mixed-use buildings, and apartments. The data table is below and continues on the next page.

|  |  | Homeownership Status |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Own | Rent | Not sure/ DK/NA |

# Q14. Housing Option Preferences Current Housing Comparisons Continued 

When we segment housing preferences by current housing type, we find that large majorities of those living in a single-family home with a small yard, those living in single-family home with a large yard, and those living in a townhouse, condo or apartment would prefer a single-family home with a large or small yard. While smaller majorities of those living in a townhome, condo or apartment would prefer to remain in a townhome or condo. Those living in a mixed-use building are too small to make meaningful comparisons.

## Q14. Housing Option Preferences

Ethnicity Comparisons

Asian and Hispanic or Latino residents were more likely to favor a single-family home with a small yard. Hispanic or Latino residents also were interested in the single-family home with a large yard and apartments, while Caucasian or White residents were more likely to say "No" to both of these options. Mixed-use buildings tended to be favored by Asian residents. The data table follows and continues on the next page.

|  |  | Ethnic Group |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Appendix B: Detailed Methodology

## Survey Parameters

The respondents were selected using a random sample of voter file numbers, and a supplemental list of Hispanic surname residents. Interviewers first asked potential respondents a series of questions referred to as "Screeners." These questions were used to ensure that the person lived in Kern County and was at least 18 years of age. Additionally, in order to ensure that the sample was representative of the ethnicity of the County population, 84 interviews were conducted in Spanish.
Overall, 1,328 residents in Kern County completed the survey, representing the population of approximately 609,827 adult residents. The study parameters resulted in a margin of error of plus or minus 2.69 percent. Interviews were conducted from January 28 to February 12, 2017, and the average interview time was 22 minutes. Interviews were conducted in either Spanish ( $n=84$ ) or English ( $n=1,244$ ), depending on the preference of the resident who was surveyed.
In order to allow segmentation of the results by region of Kern County, three areas of the County were over-sampled. During the study, oversamples were completed in each of the following regions - West Kern ( $n=218$ ), Mountains ( $n=225$ ), and East Kern ( $n=218$ ), and the remaining interviews were completed in the Central Valley region ( $n=667$ ). For the overall results presented in this report, the over-sampling was corrected by statistically weighting the data by region.

## Sample and Weighting

Once collected, the sample of respondents was compared with the actual adult population of Kern County (weighted to the 2015 American Community Survey (ACS) for gender, age and ethnicity) to examine possible differences between the demographics of the sample of respondents and the actual County population. In addition, the data were weighted to the 2010 Census data for region of residence. The data were weighted to correct differences, and the results presented are representative of the adult population of Kern County in terms of gender, age, ethnicity and region of residence.

## Questionnaire Methodology

To avoid the problem of systematic position bias, where the order in which a series of questions is asked systematically influences the answers, several questions in the survey were randomized such that the respondents were not consistently asked the questions in the same order. The series of items in Questions $3,4,5,13$, and 14 were randomized to avoid such position bias.
Questions 3, 4 and G allowed the residents surveyed to mention multiple responses. For this reason, the response percentages sum to more than 100, and these represent the percent of residents who mentioned a particular response, rather than the percent of total responses.

## Margin of Error I

Because a survey typically involves a limited number of people who are part of a larger population group, by mere chance alone there will almost always be some differences between a sample and the population from which it was drawn. These differences are known as "sampling error" and they are expected to occur regardless of how scientifically the sample has been selected. The advantage of a scientific sample is that we are able to calculate the sampling error. Sampling error is determined by four factors: the population size, the sample size, a confidence level, and the dispersion of responses.

For example, the following table shows the possible sampling variation that applies to a percent result reported from a probability type sample. Because the sample of 1,328 adult residents age 18 or older was drawn from the estimated population of Kern County of approximately 609,827 adult residents, one can be $95 \%$ confident that the margin of error due to sampling will not vary, plus or minus, by more than the indicated number of percent points from the result that would have been obtained if the interviews had been conducted with all persons in the universe. As the table on the following page indicates, the margin of error for all aggregate responses is between 1.61 and $2.69 \%$ for the survey.
This means that, for a given question with dichotomous response options (e.g., Yes/No) answered by 1,328 respondents, one can be $95 \%$ confident that the difference between the percent breakdowns of the sample and those of the total population is no greater than $2.69 \%$. The percent margin of error applies to both sides of the answer, so that for a question in which $50 \%$ of respondents said yes, one can be $95 \%$ confident that the actual percent of the population that would say yes is between $47 \%$ ( 50 minus 2.69 ) and $53 \%$ ( 50 plus 2.69).
The margin of error for a given question also depends on the distribution of responses to the question. The $2.69 \%$ refers to dichotomous questions where opinions are evenly split in the sample with 50\% of respondents saying yes and 50\% saying no. If that same question were to receive a response in which $10 \%$ of the respondents say yes and $90 \%$ say no, then the margin of error would be no greater than plus or minus $1.61 \%$. As the number of respondents in a particular subgroup (e.g., age) is smaller than the number of total respondents, the margin of error associated with estimating a given subgroup's response will be higher. Due to the high margin of error, Godbe Research cautions against generalizing the results for subgroups that are comprised of 25 or fewer respondents.

| n | Distribution of Responses |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $90 \% / 10 \%$ | $80 \% / 20 \%$ | $70 \% / 30 \%$ | $60 \% / 40 \%$ | $50 \% / 50 \%$ |
| 1328 | $1.61 \%$ | $2.15 \%$ | $2.46 \%$ | $2.63 \%$ | $2.69 \%$ |
| 900 | $1.96 \%$ | $2.61 \%$ | $2.99 \%$ | $3.20 \%$ | $3.26 \%$ |
| 800 | $2.08 \%$ | $2.77 \%$ | $3.17 \%$ | $3.39 \%$ | $3.46 \%$ |
| 600 | $2.40 \%$ | $3.20 \%$ | $3.67 \%$ | $3.92 \%$ | $4.00 \%$ |
| 500 | $2.63 \%$ | $3.50 \%$ | $4.02 \%$ | $4.29 \%$ | $4.38 \%$ |
| 400 | $2.94 \%$ | $3.92 \%$ | $4.49 \%$ | $4.80 \%$ | $4.90 \%$ |
| 300 | $3.39 \%$ | $4.53 \%$ | $5.18 \%$ | $5.54 \%$ | $5.66 \%$ |
| 200 | $4.16 \%$ | $5.54 \%$ | $6.35 \%$ | $6.79 \%$ | $6.93 \%$ |

The questions discussed and analyzed in this report comprise a subset of various crosstabulation tables available for each question. Only those subgroups that are of particular interest or that illustrate particular insights are included in the discussion. Should readers wish to conduct a closer analysis of subgroups for a given question, the complete breakdowns appear in Appendix E. These crosstabulation tables provide detailed information on the responses to each question by demographic and behavioral groups that were assessed in the survey. A typical crosstabulation table is shown here.
A short description of the item appears on the left-hand side of the table. The item sample size ( $n=1,201$ ) is presented in the first column of data under "Total."
The results to each possible answer choice of all respondents are presented in the first column of data under "Total." The aggregate number of respondents in each answer category is presented as a whole number, and the percent of the entire sample that this number represents is just below the whole number. In this example, among the total respondents, 472 respondents reported their "very satisfied" response, and this number of respondents equals $39.3 \%$ of the total sample size of 1,201 . Next to the "Total" column are the other columns representing responses from the male and female respondents. The data from these columns are read in exactly the same fashion as the data in the "Total" column, although each group makes up a smaller percent of the entire sample.

| EXAMPLE OF DATA CROSSTABULATION TABLE |  | Respondent's Gender |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Male | Female |
| 1. Generally speaking are you satisfied or dissatisfied with the quality of life in your city or town? | Very satisfied | 1201 | 619 | 582 |
|  |  | 472 | 233 | 239 |
|  |  | 39.3\% | 37.6\% | 41.1\% |
|  | Somewhat satisfied | 505 | 276 | 229 |
|  |  | 42.1\% | 44.7\% | 39.4\% |
|  | Somewhat dissatisfied | 130 | 63 | 67 |
|  |  | 10.8\% | 10.1\% | 11.5\% |
|  | Very dissatisfied | 87 | 45 | 42 |
|  |  | 7.3\% | 7.2\% | 7.3\% |
|  | DK/NA | 7 | 2 | 5 |
|  |  | .6\% | 4\% | .8\% |

To test whether or not the differences found in percent results among subgroups are likely due to actual differences in opinions or behaviors - rather than the results of chance due to the random nature of the sampling design - a "z-test" was performed. In the headings of each column are labels, "A," "B," "C," etc. along with a description of the variable. The "z-test" is performed by comparing the percent in each cell with all other cells in the same row within a given variable (within Respondent's Gender in the pictured table, for example).
The results from the "z-test" are displayed in a separate table below the crosstabulation table. If the percent in one cell is statistically different from the percent in another, the column label will be displayed in the cell from which it varies significantly. For instance, in the adjacent table, a significantly higher percent of men (44.7\%) reported "somewhat satisfied" than women (39.4\%). Hence, the letter "B," which stands women, appears under Column "A," which stands for men. The letters in the table indicate the differences where one can be $95 \%$ confident that the results are due to actual differences in opinions or behaviors reported by subgroups of respondents.

It is important to note that the percent difference among subgroups is just one piece in the equation to determine whether or not two percentage figures are significantly different from each other. The variance and sample size associated with each data point is integral to determining significance. Therefore, two calculations may be different from each other, yet the difference may not be statistically significant according to the " $z$ " statistic.

| EXAMPLE OF DATA CROSSTABULATION TABLE |  | Respondent's Gender |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Male | Female |
| 1. Generally speaking are you satisfied or dissatisfied with the quality of life in your city or town? | Total | 1201 | 619 | 582 |
|  | Very satisfied | 472 | 233 | 239 |
|  |  | 39.3\% | 37.6\% | 41.1\% |
|  | Somewhat satisfied | 505 | 276 | 229 |

## Understanding a Mean

In addition to the analysis of the percent of the responses, some results are discussed with respect to an average score. To derive the overall importance of an issue, Q5 for example, a number value was assigned to each response category - in this case,

The number values that correspond to respondents' answers were then averaged to produce a final score that reflects the overall importance of an issue. The resulting mean score makes the interpretation of the data considerably easier.
In the crosstabulation tables for Questions 5 of the survey, the reader will find mean scores. These mean scores represent the average response of each group. The table to the right shows the scales for each corresponding question. Responses of "DK/NA" were not included in the calculations of the means for any question.

| Question | Measure | Scale | Values |
| :---: | :--- | :--- | :--- |
|  |  |  | $+4.0=$ "Extremely Important" |
|  |  |  | +3.0 |
| Q5 | Importance | +4 to 0 | +2.0 |
|  | Ratings |  | +1.0 |
|  |  |  | $0.0=$ "Not Important" |

## Means Comparisons

A typical crosstabulation table of mean scores is shown in the adjacent table. All subgroups of interest concerning questions 5 are included in Appendix E.

The aggregate mean score for each item in the question series is presented in the first column of the data under "Total." For example, among all the survey respondents, the feature, "Providing programs to improve energy efficiency," earned a mean score of 1.3. Next to the "Total" column are other columns representing the mean scores assigned by the respondents grouped by Gender.
The data from these columns are read in the same fashion as the data in the "Total" column. To test whether two mean scores are statistically different, a "t-test" is performed. As in the case of the "z-test" for percentage figures, a statistically significant result is indicated by the letter representing the data column.

| EXAMPLE OF DATA FOR MEANS COMPARISON | Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Providing programs to improve energy <br> efficiency | 1.3 | 1.4 | 1.2 |
| Providing programs to conserve natural <br> resources | 1.1 | 1.1 | 1.1 |
| Providing incentives for residents, businesses, <br> schools and churches to use solar and <br> windpower | .9 | .8 | .9 |

| EXAMPLE OF DATA FOR T-TEST | Gender |  |
| :--- | :---: | :---: |
|  | Male | Female |
|  | (A) | (B) |
| Providing programs to improve energy <br> efficiency | B |  |
| Providing programs to conserve natural <br> resources |  |  |
| Providing incentives for residents, <br> businesses, schools and churches to use <br> solar and windpower |  |  |

METHODOLOGY

## Sample Universe:

- 609,827 Adults $18+$

The respondents were selected using random sample of voter file numbers, matched
to update cell phone numbers and email addresses, and a listed sample of Hispanic residents,
to update cell phone numbers and email address
Sample Size:
n=1,328
-In order to allow segmentation of the results by region of Kern County, the areas of
the County were sampled as follows.

- West Kern, $\mathrm{n}=218$

Central Valley, $\mathrm{n}=667$
Mountains, $\mathrm{n}=225$

- East Kern, n=218

## Weighting:

Data is weighted to the 2015 American Community Survey (ACS) for gender, age and
ethnicity, and weighted to the 2010 Census data for region.

2017 Kern Council of Governments Community Survey
CLIENT EMAIL SETUP INFORMATION
Step 1
The Kern Council of Governments will need to create a new email address for use by Godbe Research to send out email invitations. Unless already in use, this new email address should be:
executive.director@kerncog.org.
Step 2
After the email has been set up, have your IT Department forward all of the emails sent to the new account to: surveys.gra@gmail.com. We will handle any tech support questions sent to this account and forward any substantive emails that may require a response from a agency representative.

## Step 3

Provide Godbe Research any email lists for matching with the voter file. The data needs to include separate fields for first name, last name, street address, and email address.
However, if cell and landlines phones are available that is also very useful. The format in an excel files should be:

Bryan Godbe wbsodbe@gooberesearch.com 650-520-9150 650-288-3027 1575 Old Bayshore Highway Burlingame CA 9401
( $650-533-2320 \quad 650-288-3041 \quad 1575$ Old Bayshore Hishway Burlingame CA 94010

## Client Check List

## $\checkmark$ Set up email address

$\nabla$ Auto forward all email from new account to surveys.gra@gmail.com.
V Notify Godbe Research on completion of above so the email can be tested.
$\square$ Send email list as discussed to Godbe Research.

GENERAL EMAIL INVITATION
From: executive.director@kerncog.org
Reply to: executive.director@kerncog.org
Subject: Participate in this important study about our community
Dear [insert name],
The Kern Council of Governments has commissioned GRA and McGuire Research, independent research firms, to conduct research on important issues in your area.

Your individual responses are entirely confidential and will be used for research purposes only. Your data will not be sold or provided to anyone. You will not be approached for any other reason - we are only interested in your opinions.

For the individual named above, you can access the survey by simply clicking on the link below. If your email does not support links, cut and paste the entire link into your browser.
<survey link with unique voter file id>
We ask that you please complete the survey on or before $\qquad$ 2017, after which it will be closed.

Thank you in advance for your participation.

## Regards,

Ahron Hakimi
Executive Director
Kern Council of Governments

Technical Issues: If you have technical issues or questions with the survey link, password or completing the survey form please contact Technical Assistance (pwood@mcguireresearch.com).

Questions about the Agency or this Survey: If you have questions about the Kern Council of Governments, or the purpose of this survey please contact:
executive.director@kerncog.org
Note: Email addresses for this survey were obtained from public records at the Registrar of Voters in Kern County. If you no longer wish to receive invitations or reminders for this research please click HERE to unsubscribe.

INTRODUCTION \& SCREENERS

## [ONLINE INTRODUCTION]

Thank you for your interest in taking our survey to help understand issues in Kern County. All of your answers to the survey will be kept strictly anonymous and confidential.

## Survey Instructions:

Once you have answered all the questions on a page, click the "Next" button in the lower-left corner of the screen to continue. If you have any technical difficulties with the survey, please email: Technical Assistance.

## [PHONE INTERVIEW]

Hello, May I speak with $\qquad$ ? Hello, my name is $\qquad$ and I'm calling on behalf of GRA, a public opinion research firm. We're conducting a survey concerning some important issues in Kern County, and we would like to hear your opinions, we really appreciate your time. [VOTER; ASK FOR SPECIFIC PERSON, IF NOT AVAILABLE SCHEDULE CALL BACK. LISTED: ASK FOR SPECIFIC PERSON IF NOT AVAILABLE ASK ANOTHER ADULT 18+ IN HOUSEHOLD]
[IF NEEDED]: This is a study about issues of importance in your community. It is a survey only and I am not selling anything.
IF THE PERSON ASKS WHY YOU ONLY WANT TO TALK TO THE INDIVIDUAL LISTED ON THE SAMPLE, OR ASKS IF THEY ARE ABLE TO PARTICIPATE INSTEAD OF THE NDIVIDUAL, THEN SAY: 'I'm sorry, but for statistical purposes this survey must only be completed by this particular individual."]
[IF THE INDIVIDUAL INDICATES THAT THEY ARE AN ELECTED OFFICIAL, THANK THEM FOR THEIR TIME, POLITELY EXPLAIN THAT THE FOCUS OF THIS SURVEY IS ON THE PUBLIC'S PERCEPTION OF ISSUES, AND TERMINATE THE INTERVIEW.]
[IF THE INDIVIDUAL SAYS THEY ARE ON THE NATIONAL DO NOT CALL LIST,
RESPOND BASED ON THE GUIDELINES FROM THE MARKETING RESEARCH
ASSOCIATION. FOR EXAMPLE, IF THE INDIVIDUAL SAYS: "There's a law that says you can't call me," RESPOND WITH: "Most types of opinion research studies are exempt under the law that congress passed. That law was passed to regulate the activities of the
telemarketing industry. This is a legitimate research call. Your opinions count!"].
Before we get started, l'd like to verify that you are eligible to complete the survey

1. But first, I need to know if I have reached you on a cell phone, and if so, are you in a place where you can talk safely without endangering yourself or others?

|  |
| :---: |
|  |  |
|  |  |

Comparisons of Column Proportions ${ }^{\text {b, }}$

Results are based on two-sided tests with significance level 0.05. For
each significant pair, the key of the category with the smaller column proportion a
proportion.
a. This category is not used in comparisons because its column
proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each
innermost subtable using the
innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded
to the nearest integers before performing column proportions tests.

column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction d.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {c, }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller $h$ the larger column proportion.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. d.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each
significant pair, the key of the category with the smaller column proportion
significant pair, the key of the category with the smaller column.
appears under the category with the larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the
nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b, }}$

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the
category with the smaller column proportion appears under the category with the larger column category
proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the
Bonferroni correction.
b.Cell counts of some categories are not integers. They were rounded to the nearest integers before
performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column
proportions tests.

Comparisons of Column Proportions ${ }^{\mathrm{c}, \mathrm{d}}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller .
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b, }}$,

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level O.05. For each
significant pair, the key of the category with the smaller column proportion
significant pair, the key of the category with the smaller column proportion
appears under the category with the larger column proportion.
and
a.This category is not used in comparisons because its column proportion is
equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each
innermost subtable using the Bonferroni correction. innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the
nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller Results are based on two-sided tests with significance level 0.05. For each signific
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the
key of the category with the smaller column proportion appears under the category with the key of the category with
larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or
one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using
the Bonferroni correction. the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers
before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b, }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the
category with the smaller column proportion appears under the category with the larger column proportion
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller proportion
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions, ${ }^{\text {b, }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b, }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the
the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column c.Cel counts ofs.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05 . For each signin.
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column c.Cel counts
proportions tests.

Comparisons of Column Proportions ${ }^{\text {c, }}$

Godbe Research /// Kern COG 2017 Community Survey I// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\mathrm{c}, \mathrm{d}}$

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller
column proportion appears under the category with the larger column proportion. column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. This category is not used in comparisons because the sum of case weights is less than two
c.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. d.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with
the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column c.Cell counts of s.
proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller Results are based on two-sided tests with significance level 0.05. For each signific
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level O.05. Fo
each significant pair, the key of the category with the smaller column each significant pair, the key of the category with the smaller co
proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column
proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each
innermost subtable using the Bonferroni correction. innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of
the category with the smaller column proportion appears under the category with the larger column the category
proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
${ }^{\text {b. Tests are }}$ adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before
performing column proportions tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the smaller ,
a.This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

|  | Work from home/don't work outside the home |  |  |
|  | Other (SPECIFY) |  | a |
|  | DK/NA | BDEF |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller poportion
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance levol 0.05. For each signitica
pair, the key of the category with the smaller column proportion appears under the
pair, the key of the category with the smaller
category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero
or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable
using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest
integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller Results are based on two-sided tests with significance level 0.05 . For each signific
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

## Comparisons of Column Proportions ${ }^{\text {a }}$

Results are based on two-sided tests with
significance level 0.05 . For each significant
pair, the
pair the key of the category with the smaller
column proportion appears under the category
with the larger column proportion.
a. Tests are adjusted for all pairwise
comparisons within a row of each innermost
subtable using the Bonferroni
subtable using the Bonferroni correction.
b. Cell counts of some categories are not
integers. They were rounded to the nearest
integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column propotion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {a, }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of ${ }_{a}$ Column Proportions ${ }^{\text {a }}$

Results are based on two-sided tests Resultis are based on two-sided tests with
significance level 0.05 For ach significant pair, the key of the category with the smaller column proportion appears un
the category with the larger column proportion.
a. Tests are adjusted for all pairwise comparisons within a row of each
innermost subtable using the Bonferron innermost
correction.
b.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

|  |  | Respondent's Gender |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Male | Female | Other |
|  |  | (A) | (B) | (C) |
| 9. On average, how many minutes do you spend traveling to and from work or school each day? | 180 | B |  |  |
|  | 195 |  | a | a |
|  | 200 |  | a | a |
|  | 240 |  | a | a |
|  | 999 |  |  |  |

Results are based on two-sided tests with significance level
0.05. For each significant pair, the key of the category with the smaller column proportion air, thears under the category with th larger column proportion.
a.This category is not used in comparisons because its column proportion is equal to zero or one
b.Tests are adjusted for all pairwise comparisons within a row b.Tests are adjusted for all pairwise comparisons within a row
of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column
proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For
each significant pair, the key of the category with the smaller column
 proportion
proportion.
a. This category is not used in comparisons because its column
proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded
to the nearest integers before performing column proportions tests.

| 9. On average, how many minutes do you spend traveling to and from work or school each day? | 200 | a |  | ${ }^{\text {a }}$ | $\stackrel{a}{a}$ |
|  | 240 |  |  |  |  |
|  | 999 |  |  |  |  |
| Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion. |  |  |  |  |  |
| a. This category is not used in comparisons because its column proportion is equal to zero or one. |  |  |  |  |  |
| b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. |  |  |  |  |  |
| c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests. |  |  |  |  |  |

|  | 999 |  |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level O.05.
For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger
cole sith column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of b.Tests are adjusted for all pairwwise comparisons within a
each innermost subtable using the Bonferroni correction. c. Cell counts of some categories are not integers. They were c.Cell counts of some categories are not integers. They were
rounded to the nearest integers before performing column
proportions tests.

|  | 240 | ${ }^{\text {a }}$ |  |  |  |
|  | 999 | a |  |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion a. This category is not used in comparisons because its column proportion is equal to zero or one. b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the
Bonferroni correction. Cllor
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

the eky of the category with the smaller column proportion appears under the category with
the larger column proportion. the key of the category with the
the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or
one. one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers
before perfforming column before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category
with the smaller column proportion appears under the category with the larger column proportion. a thi ca is mued cor ar
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing
column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one
a. This category is not used in comparisons because the sum of case weights is less than two.
c.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
d.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For
each significant pair, the key of the category with the smaller column
proportion appears
proportion
proportion.
a. This category is not used in comparisons because its column
proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded
to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to $z$ ero or one
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {a }}$

Results are based on two-sided tests with
significance level 0.05 . For each significant Signiticance level 0.05. For each significant
pair, the key of the category with the smaller column proportion appears under the category
proportion.
a. Tests are adjusted for all pairwise a. Tests are adithin a row of each
comparisons withi
innermost subtable using the Bonferroni innermost
correction.
b. Cell counts of some categories are not integers. They were rounded to the neares integers before performing column
proportions tests.

## Godbe Research /// Kern COG 2017 Community Survey I// Crosstabs 04-19-17

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion
a.This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Resultts are based on two-sided tests with significance level 0.05. For
each significant pair, the key of the category with the smaller column each significant pair, the key of the category with the smaller
proportion appears under the category with the larger column
proportion.
a. This category is not used in comparisons because its column
proportion is equal to zero or one.
pros
b.Tests are adjusted for all pairwise comparisons within a row of each
innermost subtable using the Bonferronic cell counts of some categories are not correction. to the nearest integers before performing column proportions tests.

Results are based on tw wisced tests win signin cance river a.05. For each significant pair, the key of the category with th
the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or
one. b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable
using the Bonferroni correction using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest
integers before performing column proportions tests.

|  | 999 |  |  |  |

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// Kern COG 2017 Community Survey I// Crosstabs 04-19-17
Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests with significance leve
0.05. For each significant pair the key of the category with 0.05. For each significant pair, the key of the category with
the smaller column proportion appears under the category
with the larger column proportion. with the larger column proportion.
a. This category is not used in comparisons because its
column proportion is equal to zero or one.
column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a
row of each innermost subtable using the Bonferroni row of each
correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column
proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with th
the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable
using the Bonferroni correction. using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers
before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the
Results are based on two-sided tests with significance level 0.05. For each significant pair, the
category with the smaller column proportion appears under the category with the larger column
proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one. b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the
Bonferroni correction. Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before
performing column proportions tests.

Godbe Research /// Kern COG 2017 Community Survey I// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category

a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some
column proportions tes

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller Results are based on two-sided tests with significance level 0.05. For each signific
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction d.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests. tests.

Godbe Research /// Kern COG 2017 Community Survey I// Crosstabs 04-19-17
Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction. c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significan Revel 0.05. For each significant pair, the key of the
category with the smaller column proportion appears
under the category with the larger under the category with the larger column proportion.
a. This category is not used in comparisons because its
column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within
a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They
were rounded to the nearest integers before performing were rounded to the nearest integers before performing
column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$
 significant pair, the key of the category with the smaller column.
appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion
is equal to zero or one. is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each
innermost subtable using the Bonferroni correction.
innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to
the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller Results are based on two-sided tests with significance level 0.05 . For each sign
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one
b.This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b, }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category
with the smaller column proportion
with the smaller column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni
correction correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing
column proportions tests.

Godbe Research /// Kern COG 2017 Community Survey /// Crosstabs 04-19-17
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests with significance level 0.05. For each significant pair, the key of the category with the smaller Results are based on two-sided tests with significance level 0.05 . For each signift
column proportion appears under the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c.Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests with significance level 0.05 . For each significant pair, the key of the category with the
This category is not used in comprisons because its column proportion is equal to zero
b.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.
