

Kern Council of Governments: 2019 Community Survey

May 2019

The Kern Council of Governments commissioned Godbe Research to conduct a telephone and online survey of residents of Kern County with the following research objectives:
> Gauge residents' overall opinion of current and future quality of life in their city or town;
$>$ Survey the importance of specific issues related to future quality of life in the County;
> Understand the daily commute behavior of the average resident;
> Gauge opinion on the impact of new employers on traffic issues;
$>$ Determine housing preferences; and
$>$ Identify any differences in opinion due to demographic and/or behavioral characteristics.

## Methodology Overview

> Data Collection
> Universe
> Fielding Dates
> Interview Length
> Sample Size
> Margin of Error

Telephone and online interviewing
621,092 adult (age 18 or older) residents of Kern County

February 19 through March 1, 2019
22 minutes (Phone)
1,351 Adult residents
(Cell=61; Landline=237; Text/online=1,053) 20 interviews were conducted in Spanish
$\pm 2.66 \%$

Executive Summary

## Executive Summary I

$>$ Numerically, the survey showed a lower level of satisfaction with the quality of life among Kern County residents than in the past, with 67.2 percent indicating they are satisfied. Statistically, there is a not a difference among the respondents between 2019 (67.2\%) and 2018 (72.4\%).
> Looking ahead to the next 20 years, 29.5 percent of the residents surveyed think the quality of life in their city or town will be "much better" or "somewhat better". This is numerically lower than 2018 (34.1\%), but statistically equivalent. 24.1 percent think it will "stay about the same," and 41.4 percent think it will be "somewhat worse" or "much worse."
$>$ In an open-ended format, the "cost of living" (39.6\%), "cost of housing" (36.9\%) and "small town atmosphere" (36.3\%) are the things that respondents cited that they liked most about their city or town.
Contrastingly, "air quality" (49.8\%) and "crime rate" (46.5\%) are the things they liked least about their city or town, both of which are higher than in 2018.

## Executive Summary II

> The 2019 survey assessed the importance of 20 issues in improving the future quality of life in Kern County. The most important issues for the future in 2019 were:

- Improving crime prevention and gang prevention programs (3.55)
- Preserving water supply (3.54)
- Improving the quality of public education (3.53)
- Maintaining local streets and roads (3.49)
- Improving water quality (3.47)
- Creating more high paying jobs (3.44)
- Improving air quality (3.42)
$>$ Similar to 2018 , the results show that 80.7 percent (when drive alone and autonomous* are added together) of residents typically drive alone in their commute to work or school, and 20.3 percent indicated that carpooling was their secondary mode choice.

## Executive Summary III

> 10.7 percent of respondents rated traffic flow as "Excellent". 32.0 percent of respondents rated traffic flow as "Good", while 40.4 percent ranked it as "Fair" and 16.3 percent said it was "Poor".
$>75.4$ percent of residents reported a commute of 40 minutes or less in 2019, compared to 69 percent in 2018 and 72.6 percent in 2017.
> 54.1 percent of residents reported a commute of 20 miles or less in 2019, compared to 62.3 percent in 2018 and 61.2 percent in 2017.
> Respondents who drive alone were also asked if they would take an alternative if it were available. 46.8 percent indicated they would continue driving alone. Just 9.4 percent also said they would car or vanpool.
$>81.5$ percent of respondents indicated that the new jobs being created in Kern County were definitely or probably were worth the impact of new commute or truck trips.

## Executive Summary IV

> The 44.7 percent of respondents indicated they currently live in a singlefamily home with a large yard, while 36.7 percent indicated they reside in a single-family home with a small yard, 13.5 percent live in an apartment, and 3.4 percent live in a townhouse or condo.
> The largest majority of respondents (83.8\%, definitely or probably) indicated they would prefer a single-family home with a large yard. Secondarily, 71.5 percent chose a single-family home with a small yard. While 42.7 percent indicated they would prefer a townhome or condo, 34.5 percent would prefer an apartment, and 27.7 percent would prefer a condo in a mixed-use building.

Key Findings

# Q1. Satisfaction with Quality of Life ( $\mathrm{n}=1,351$ ) 

The survey began by asking residents to rate their satisfaction with the quality of life in their city or town. Overall, residents are still positive about the quality of life, but there are slightly more residents expressing dissatisfaction than in the past survey. In a trend seen in the 2018 survey results, fewer residents indicated they are "Very satisfied" and there was an equal increase in those who said they were "Somewhat dissatisfied." However, more than two-thirds of residents indicated some level of satisfaction, with approximately one third having said they were dissatisfied. About one percent of residents did not offer an opinion or declined to answer the question (DK/NA). On the next page, the chart illustrates the differences in relative satisfaction with quality of life for 2019 at $67.2 \%$ ("Very satisfied" at 19.7\%, "Somewhat satisfied" at 47.5\%), compared with survey results from 2018 (72.4\%), 2017 (83.5\%), 2016 (85.1\%), 2015 (82.0\%), 2014 (84.3\%), 2012 (81\%), and 2010 (78\%).

The data are illustrated on the following page.

## Q1. Satisfaction with Quality of Life ( $\mathrm{n}=1,351$ ) Continued

## Q1. Satisfaction with Quality of Life

 Gender ComparisonsWhen the results are viewed in light of differences expressed by gender, residents who identified as "Other" were more likely to indicate dissatisfaction with the quality of life.

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1351 | 684 | 653 | 15 |
|  | 266 |  |  |  |
| Somewhat satisfied | $19.7 \%$ | $21.6 \%$ | 118 | 0 |
|  | $47.5 \%$ | 313 | $18.1 \%$ | $2.5 \%$ |
| Somewhat dissatisfied | 301 | $45.7 \%$ | $49.6 \%$ | 6 |
|  | $22.2 \%$ | $21.5 \%$ | 151 | 30 |
| Very dissatisfied | 124 | 65 | $23.1 \%$ | $22.5 \%$ |
|  | $9.2 \%$ | $9.5 \%$ | 84 | 5 |
|  | 18 | 12 | 7 | $34.4 \%$ |

## Q1. Satisfaction with Quality of Life Age Comparisons

Generally speaking, in terms of responses analyzed by age, residents (ages 60 and older) had a greater tendency to state they are "Very satisfied" with the quality of life. Younger respondents were more likely to indicate dissatisfaction.

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q1. Satisfaction with Quality of Life Regional Comparisons

The Mountains region resident were more likely to say they were "Very satisfied" with the quality of life. In contrast, residents of the East Kern area had a greater tendency to indicate they were "Very dissatisfied."

|  | Zip Code Area |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central <br> Valley | Mountains | East Kern |
| Total | 1351 | 55 | 1075 | 94 | 126 |
|  | 266 | 11 | 194 | 41 | 20 |
| Somewhat satisfied | 642 | 23 | 529 | 37 | $15.5 \%$ |
|  | $37.5 \%$ | $40.6 \%$ | $49.2 \%$ | $39.4 \%$ | $42.6 \%$ |
| Very dissatisfied | $22.2 \%$ | $26.3 \%$ | 246 | 11 | 30 |
|  | 124 | 7 | $22.8 \%$ | $11.5 \%$ | $23.4 \%$ |
| DK/NA | $9.2 \%$ | $11.9 \%$ | 80 | 4 | 23 |
|  | 18 | 0 | $17.4 \%$ | $4.2 \%$ | $18.2 \%$ |

# Q2. Outlook on Future Quality of Life ( $\mathrm{n}=1,351$ ) 

Next, respondents were asked to predict whether they felt the quality of life in their city or town would become better or worse over the next 20 years, or if it would stay about the same. The current survey results are basically identical to 2018, with one exception. There is a small decrease in those who indicated that life will be "Somewhat better" in the future ( $21.1 \%$ in 2019 vs. $25.1 \%$ in 2018).

The results are shown on the following page.

## Q2. Outlook on Future Quality of Life $(1,351)$ Continued

## Q2. Outlook on Future Quality of Life Gender Comparisons

Residents who indicated "Other" for gender, were more likely to say the future would be "Much worse."

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1351 | 684 | 653 | 15 |
|  |  |  |  |  |
| Much better | 114 | 68 | 46 | 0 |
|  | $8.4 \%$ | $10.0 \%$ | $7.0 \%$ | $2.5 \%$ |
| Somewhat better | 284 | 137 | 147 | 1 |
|  | $21.1 \%$ | $20.0 \%$ | $22.5 \%$ | $5.2 \%$ |
| Stay about the same | 325 | 184 | 139 | 3 |
|  | $24.1 \%$ | $26.9 \%$ | $21.3 \%$ | $19.0 \%$ |
| Somewhat worse | 358 | 180 | 177 | 1 |
|  | $26.5 \%$ | $26.3 \%$ | $27.1 \%$ | $6.4 \%$ |
| Much worse | 202 | 92 | 100 | 10 |
|  | $15.0 \%$ | $13.5 \%$ | $15.4 \%$ | $66.8 \%$ |
| DK/NA | 67 | 23 | 44 | 0 |
|  | $5.0 \%$ | $3.4 \%$ | $6.7 \%$ | $0.0 \%$ |

## Q2. Outlook on Future Quality of Life Age Comparisons

Respondents ages 85 and older were more likely to indicate they view the future potential as "Much better." Conversely, residents ages 55 to 59 had a greater tendency to state they felt the future would be "Somewhat worse" and those ages 25 to 34 had a higher likelihood to report they predicted the future would be "Much worse."

|  | Age |  |  |  |  |  |  |  |  |  |  |

# Q3. Most Liked Features of City or Town ( $\mathrm{n}=1,351$ ) 

In the next question with an open-end format and multiple responses accepted, residents were asked what features they liked most about their city or town. The most popular responses were "Cost of living" at $39.6 \%$, "Cost of housing" at $36.9 \%$, and "Small-town atmosphere" at $36.3 \%$. The next tier of responses included "Location" at $26.2 \%$ and "Sense of community" at $20.1 \%$. Following these were "Natural resources" at 18.1\%, "Weather and climate" at $17.9 \%$, "Safe neighborhoods/communities" at $17.4 \%$, "Farming and agriculture" at $15.6 \%$, "Cultural diversity" at $12.7 \%$,and "Quality of education" at $10.1 \%$. All other features garnered less than ten percent mentions.

This data are illustrated on the next page.

# Q4. Least Liked Features of City or Town ( $\mathrm{n}=1,351$ ) 

Consistent in format with the previous question, residents were asked to report the features they like least about their city or town. Respondents were allowed to give multiple responses in an open-end format. About half of the respondents said "Air quality," followed closely by "Crime rate" and "Homelessness." "Gang violence" was mentioned by more than a third of residents, while about a quarter of residents said "Job opportunities" and "Traffic congestion." Approximately one fifth of residents answered this question with "Lack of community resources." The next tier of responses included "Growth and planning" at 17.4\%, "Public transportation" at $14.4 \%$, "Youth programs" at 14.2\%, "Housing affordability" at 13.0\%, and "Cost of living" at $12.5 \%$. All other responses received less than ten percent mentions

The data are depicted on the following page.

Q4. Least Liked Features of City or Town ( $\mathrm{n}=1,351$ ) Continued

## Q5. Economic Vitality and Equitable Services ( $\mathrm{n}=1,351$ )

In this section of the survey, residents were asked to consider the next 20 years and rate the importance of specific issues about improving the future quality of life in Kern County. The results are presented on the following pages and grouped by similar sets of issues. At the close of this section, there are also tables which include all the issues examined in this portion of the survey, segmented by gender, age, region, ethnicity, and household income.

In the first set of issues, respondents were asked to think about issues of Economic Vitality and Equitable Services. The importance rating of the issues in this section are essentially identical to 2018. The feature "Creating more high paying jobs (5A)" (mean score of 3.44) garnered an "Extremely important" rating by more than $60 \%$ of residents and "Encouraging new businesses to relocate to County (5B)" (mean score of 3.23) was given an "Extremely important" rating by more than half of residents.

The data are presented on the following pages for each of the specific issues included in the Economic Vitality and Equitable Services grouping in the form of a summary chart, comparative table, and subgroup comparisons. This format is followed for each of the sections of this question.

## Q5. Economic Vitality and Equitable Services

 Gender ComparisonsWhen examined in terms of gender, there were no statistically significant differences in response among men, women and those who identified as "Other."

|  | Respondent's Gender |  |  |  |
| :--- | :--- | :--- | :--- | :---: |
|  | Total | Male | Female | Other |
| 5A. Creating more high paying jobs | 3.44 | 3.38 | 3.49 | 3.55 |
| 5B. Encouraging new businesses to relocate to the County in order to diversify the <br> local economy | 3.23 | 3.23 | 3.22 | 3.40 |

## Q5. Economic Vitality and Equitable Services Age Comparisons

When looked at in terms of age, residents ages 25 to 34 were more likely to place higher importance on "Creating more high paying jobs (5A)."

|  |  | Age |  |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | $\mathbf{1 8 - 2 4}$ | $\mathbf{2 5 - 3 4}$ | $\mathbf{3 5 - 4 4}$ | $\mathbf{4 5 - 5 4}$ | $\mathbf{5 5 - 5 9}$ | $60-64$ | $\mathbf{6 5 - 7 4}$ | $\mathbf{7 5 - 8 4}$ | 85 <br> over | Not sure/ <br> DK/NA |
| 5A. Creating more high paying jobs | 3.44 | 3.45 | 3.60 | 3.48 | 3.50 | 3.33 | 3.40 | 3.25 | 3.13 | 3.06 | 2.76 |
| 5B. Encouraging new businesses to relocate <br> to the County in order to diversify the local <br> economy |  |  |  |  |  |  |  |  |  |  |  |

## Q5. Economic Vitality and Equitable Services Regional Comparisons

Central Valley region residents had a greater tendency to place importance on "Creating more high paying jobs (5A)." In addition, West Kern, Central Valley and East Kern residents were more likely to give higher importance ratings for "Encouraging new businesses to relocate to the County in order to diversify the local economy (5B)."

|  | Zip Code Area |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West <br> Kern | Central <br> Valley | Mountains | East <br> Kern |
| 5A. Creating more high paying jobs | 3.44 | 3.43 | 3.48 | 3.14 | 3.25 |
| 5B. Encouraging new businesses to relocate to the County in order to <br> diversify the local economy | 3.23 | 3.38 | 3.23 | 2.90 | 3.38 |

# Q5. Community Assets and Infrastructure ( $\mathrm{n}=1,351$ ) 

In next section, Community Assets and Infrastructure were discussed. The current results essentially mirror those of 2018. The two issues in this section, "Revitalizing older neighborhoods and business districts (5C)" (with a mean score of 3.16) and "Creating more affordable housing (5D)" (with a mean score of 2.97), garnered an "Extremely important" rating from nearly half of the residents.

The results for the current survey are presented on the following pages in the form of a summary chart, comparative table, and subgroup comparisons

## Q5. Community Assets and Infrastructure Regional Comparisons

When analyzed in terms of region, West Kern and Central Valley region residents had a greater tendency to ascribe higher importance for both issues tested in this section of the survey.

|  | Zip Code Area |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West <br> Kern | Central <br> Valley | Mountains | East <br> Kern |
| 5C. Revitalizing older neighborhoods and business districts that are <br> becoming rundown | 3.16 | 3.30 | 3.21 | 2.71 | 2.97 |
| 5D. Creating more affordable housing | 2.97 | 3.07 | 3.07 | 2.31 | 2.61 |

Seven transportation issues were discussed in the next section of the survey. Residents were asked to rate the importance of issues relating to transportation choices for improving the future quality of life in Kern County. As in previous sections, the results for the current survey are presented on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

The results of the current survey are identical with those of 2018. Only one of the seven issues achieved a mean score of at least three on a scale of zero to four. The issue "Maintaining local streets and roads (5G)," achieved a mean score of 3.49, with an "Extremely Important" rating from more than three out of five residents.

Following in order of importance rating were the issues "Maintaining and improving sidewalks and bike lanes (5J)" (mean score of 2.79), "Reducing traffic congestion (5F)" (mean score of 2.74), "Expanding highways (5E)" (mean score of 2.7), "Improving public transportation to other cities (5I)" (mean score of 2.56), and "Providing public transportation, carpooling, and other alternatives to driving alone (5K)" (mean score of 2.45). These issues each received an "Extremely Important" rating from more than three out of ten residents.

The remaining issue, "Expanding local bus services (5H)" (mean score of 2.45) received an "Extremely Important" rating from more than a quarter of residents.

The chart illustrating the data are presented on the next two pages.

## Q5. Transportation Choices Gender Comparisons

Women were more likely to ascribe higher importance to four of the issues, which include "Expanding local bus services (5H)," "Improving public transportation to other cities (5I)," "Maintaining and improving sidewalks and bike lanes (5J)," and "Providing public transportation, carpooling, and other alternatives to driving alone (5K)."

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| 5E. Expanding highways | 2.70 | 2.69 | 2.73 | 2.37 |
| 5F. Reducing traffic congestion | 2.74 | 2.69 | 2.79 | 2.36 |
| 5G. Maintaining local streets and roads | 3.49 | 3.48 | 3.50 | 3.75 |
| 5H. Expanding local bus services | 2.45 | 2.16 | 2.76 | 2.44 |
| 5I. Improving public transportation to other cities | 2.56 | 2.32 | 2.82 | 2.70 |
| 5J. Maintaining and improving sidewalks and bike lanes | 2.79 | 2.69 | 2.90 | 2.73 |
| 5K. Providing public transportation, carpooling, and other alternatives to driving alone | 2.45 | 2.22 | 2.69 | 2.85 |

# Q5. Transportation Choices Age Comparisons 

The 18-to-24-year-olds were more likely to place higher importance on "Reducing traffic congestion (5F)" and "Improving public transportation to other cities (5I)." Further, the residents ages 35 to 44 had a greater tendency to place importance on "Maintaining and improving sidewalks and bike lanes (5J)." Lastly, respondents ages 18 to 24 and 65 to 74 were more likely to express higher importance for "Providing public transportation, carpooling, and other alternatives to driving alone (5K)."

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 5K. Providing public transportation, <br> carpooling, and other alternatives to driving <br> alone |  |  |  |  |  |  |  |  |  |  |  |

## Q5. Transportation Choices Regional Comparisons

Residents of the Central Valley region were more likely to ascribe higher importance to "Expanding highways (5E)," "Maintaining and improving sidewalks and bike lanes (5J)," and "Providing public transportation, carpooling, and other alternatives to driving alone (5K)." In addition, the West Kern, Central Valley and Mountains regions residents tended to emphasize importance for "Reducing traffic congestion (5F)."

|  | Zip Code Area |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | Total | West <br> Kern | Central <br> Valley | Mountains | East <br> Kern |
| 5E. Expanding highways | 2.70 | 2.64 | 2.78 | 2.31 | 2.38 |
| 5F. Reducing traffic congestion | 2.74 | 2.48 | 2.95 | 2.08 | 1.51 |
| 5G. Maintaining local streets and roads | 3.49 | 3.44 | 3.52 | 3.35 | 3.37 |
| 5H. Expanding local bus services | 2.45 | 2.53 | 2.48 | 2.14 | 2.38 |
| 5I. Improving public transportation to other cities | 2.56 | 2.58 | 2.57 | 2.43 | 2.61 |
| 5J. Maintaining and improving sidewalks and bike lanes | 2.79 | 2.85 | 2.84 | 2.40 | 2.64 |
| 5K. Providing public transportation, carpooling, and other alternatives to <br> driving alone | 2.45 | 2.27 | 2.54 | 2.15 | 1.94 |

# Q5. Conserve Undeveloped Land and Natural Resources <br> ( $\mathrm{n}=1,351$ ) 

Conserving undeveloped land and natural resources for improving the future quality of life in Kern County was the topic for the next set of issues tested.

Once again, the data for the current survey are identical to the 2018 survey. Three of the four issues achieved a mean score of at least three on a scale of zero to four. These highest scoring issues were "Preserving water supply (5M)" with a mean score of 3.54 , "Improving water quality ( 5 N )" at 3.47 and "Improving air quality ( 5 L )" at 3.42. The issue "Preserving water supply (5M)" achieved an "Extremely Important" rating by $70 \%$ of residents, while "Improving air quality (5L)" and "Improving water quality (5N)" received an "Extremely Important" rating from two-thirds of residents. Lastly, the lowest scoring issue, "Preserving open spaces, native animal habitats (50)" at 2.9, was rated as "Extremely Important" by about $40 \%$ of residents.

The data is presented in the form of a summary chart, comparative table, and subgroup comparisons on the following pages.

## Q5. Use Compact, Efficient Development Where

 Appropriate and Provide a Variety of Housing Choices ( $\mathrm{n}=1,351$ )In this section, the residents were asked to indicate the level of importance for use of compact, efficient development where appropriate and providing a variety of housing choices for improving the future quality of life in Kern County. The current results reveal a small, but statistically insignificant, increase in importance for the single issue under consideration, "Developing a variety of housing options, including apartments, townhomes and condominiums (5P)." This issue achieved a mean score of 2.58 and also was considered to be "Extremely Important" by about 30\% of residents.

The comparative results are illustrated on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices ( $\mathrm{n}=1,351$ ) Continued

# Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices Gender Comparisons 

Women were more likely to place higher importance on this issue.

|  | Respondent's Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Other |  |  |  |
| 5P. Developing a variety of housing options, including apartments, townhomes and <br> condominiums | 2.58 | 2.42 | 2.76 |

## Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices Age Comparisons

In terms of age, the youngest residents, ages 18 to 24 , were more likely to express importance for this issue than the older residents.

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | $18-24$ | $25-34$ | $35-44$ | $45-54$ | $55-59$ | $60-64$ | $65-74$ | $75-84$ | 85 and <br> over | Not sure/ <br> DK/NA |
| 5P. Developing a variety of housing options, <br> including apartments, townhomes and <br> condominiums |  |  |  |  |  |  |  |  |  |  |  |

## Q5. Use Compact, Efficient Development Where Appropriate and Provide a Variety of Housing Choices Regional Comparisons

The respondents of the West Kern and Central Valley regions had a greater tendency to ascribe higher importance to this issue.

|  | Zip Code Area |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West <br> Kern | Central <br> Valley | Mountains | East <br> Kern |
| 5P. Developing a variety of housing options, including apartments, <br> townhomes and condominiums | 2.58 | 2.82 | 2.69 | 1.75 | 2.20 |

The last section of this question asked residents to rate the importance of a variety of services, safety and equity issues for improving the future quality of life in Kern County. As in the previous sections, the results are presented on the following pages in the form of a summary chart, comparative table, and subgroup comparisons.

As seen in the other issues, the results of the current survey were virtually identical to those of 2018, and like previous years, each issue achieved a mean score of at least three on a scale of zero to four.

The highest scoring issues were "Improving crime prevention and gang prevention programs (5S)" with a mean score of 3.55 and "Improving the quality of public education (5T)" with a mean score of 3.53. These two issues also received an "Extremely Important" rating from nearly 70\% of residents. The issues "Improving local health care and social services (5R)" with a mean score of 3.26 and "Improving fire and emergency medical services (5Q)" with a mean score of 3.17 achieved an "Extremely Important" rating from more than half of the residents.

| 5T. Improving the quality of public education | 3.53 | 3.62 | 3.75 | 3.49 | 3.43 | 3.28 | 3.56 | 3.36 | 3.41 | 3.58 | 3.15 |

## Q5. Services, Safety and Equity Regional Comparisons

Residents of the West Kern region were more likely to cite higher importance for "Improving local health care and social services (5R)," while Central Valley residents had a greater tendency to ascribe importance for "Improving the quality of public education (5T)." Both West Kern and Central Valley region residents tended to place higher importance on "Improving crime prevention and gang prevention programs (5S)."

|  | Zip Code Area |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West <br> Kern | Central <br> Valley | Mountains | East <br> Kern |
| 5Q. Improving fire and emergency medical services | 3.17 | 3.05 | 3.20 | 3.00 | 3.03 |
| 5R. Improving local health care and social services | 3.26 | 3.52 | 3.26 | 3.05 | 3.28 |
| 5S. Improving crime prevention and gang prevention programs | 3.55 | 3.63 | 3.59 | 3.17 | 3.41 |
| 5T. Improving the quality of public education | 3.53 | 3.34 | 3.58 | 3.30 | 3.30 |

# Q5. Importance of Specific Issues in Next 20 Years 

The survey assessed the importance of 20 issues related to improving the future quality of life in Kern County, which were tracked with results from previous surveys. While these issues were not grouped when presented to the survey respondent, they have been grouped into the six topic areas: (a) Economic Vitality and Equitable Services; (b) Community Assets and Infrastructure; (c) Transportation Choices; (d) Conserving Undeveloped Land and Natural Resources; (e) Use Compact, Efficient Development Where Appropriate and Provide Variety of Housing Choices; and (f) Services and Public Safety.
> The top seven rated issues, across categories, resulted in nearly identical responses as in 2018, albeit in a slightly different order:

- "improving crime prevention and gang prevention programs (3.55 on a scale of 4 to 0)
" "preserving water supply" (3.54)
" "improving the quality of public education" (3.53)
" "maintaining local streets and roads" (3.49)

# Q6. Type of Transportation Used Traveling to Work or School ( $\mathrm{n}=1,351$ ) 

In the current survey, most of the responses mirror those of the 2018 survey results. However, there appears to be a large shift of those who previously said they drive alone to those who currently utilize an autonomous or self-driving car. To account for this, as noted below the chart on the next page, it appears that respondents may have confused self-driving features on current model cars with fully autonomous vehicles, as the difference between the "Drive alone" and "Autonomous/self driving car" response categories offset each other. The other item of note is a slight decrease in the number of residents who said they carpool or vanpool ( $4.3 \%$ in 2019 vs. $7.9 \%$ in 2018).

The data are shown a chart that follows on the next two pages.

## Q6. Primary Type of Transportation Used Traveling to Work or School Age Comparisons

Residents 18 to 54 and 75 to 84 were more likely to drive alone, while those 55 to 59 had a higher tendency to use an electric vehicle. Those ages 60 to 64 and 85 and older tended to take traditional bus service, while the 75-to-84-year-olds had a higher tendency to say they walk. Residents 55 and older were also more likely to say they work from home or don't work outside the home.

## Q6. Primary Type of Transportation Used Traveling to Work or School Regional Comparisons

In terms of geographical differences in response, residents of the Mountains region were more likely to say they work from home or don't work outside the home.

# Q7. Secondary Type of Transportation Used Traveling to Work or School 

Next, the residents were asked what secondary transportation modes they used for traveling to work or school. There are significant differences in the current survey results when compared with 2018. To begin, there was a large increase in those who said they "Drive alone" ( $32.1 \%$ in 2019 vs. $6.0 \%$ in 2018). In contrast, there were small decreases in those who gave the response "Carpool/vanpool" (20.3\% in 2019 vs. 27.0\% in 2018) and "Traditional/express/shuttle bus service" (4.3\% in 2019 vs. $8.4 \%$ in 2018). Interestingly, there were also significant decreases in those who gave "Other" responses or said they either did not know or had no answer for this question. It should also be noted that $6.1 \%$ of respondents gave the answer "Autonomous/self driving car," but as noted in the previous question it is possible that respondents may have confused self-driving features on current model cars with fully autonomous vehicles.

The results are illustrated on the next two pages.

## Q7. Secondary Type of Transportation Used Traveling to Work or School ( $n=1,268$ ) Continued

## Q7. Secondary Type of Transportation Used Traveling to Work or School ( $n=1,268$ ) Continued

## Q7. Secondary Type of Transportation Used Traveling to Work or School

Men were more likely to bike or drive alone as a secondary transit mode. Women tended to indicate they opt for a taxi, bus service, or said they work at home or don't work outside the home. Residents who stated "Other" as a gender designation had a greater tendency to utilize "Electric scooter sharing" and "Express bus service."

# Q7. Secondary Type of Transportation Used Traveling to Work or School Age Comparisons 

In terms of age, the youngest residents, ages 18 to 54 , were more likely to state they utilized a carpool or vanpool as a secondary mode of transportation. Residents ages 55 to 59 and residents ages 75 to 84 had a greater tendency to indicate they work from home or do not work outside the home, while the 60 -to- 64 -yearolds tended to say they use bus services in this instance. Traveling by bike was more likely to be favored by residents ages 60 to 74 for alternative transportation.

The results are presented as a table on the next page.

# Q7. Secondary Type of Transportation Used Traveling to Work or School Regional Comparisons 

When analyzed by region, West Kern region residents tended to prefer electric scooter sharing, shuttle service and walking as alternative transit modes. Residents of the Central Valley and East Kern regions were more likely to say they carpool/vanpool, while Mountains region residents tended to indicate a greater affinity for bus service.

The data table is on the following page.

Q8. Rating of Traffic Flow in City or Town ( $n=1,268$ )

Next, residents were asked to rate the flow of traffic in their city or town. The current survey results are identical to 2018 with the exception that there was a slight decrease in the number of residents who said "Fair" in response to this question.

## Q8. Rating of Traffic Flow in City or Town Gender Comparisons

Men were more likely to indicate they felt traffic flow was "Excellent," while women had a greater tendency to say it was "Fair." The most pessimistic response of "Poor" was more likely to be given by residents who identified as "Other."

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1268 | 662 | 592 | 13 |
|  |  |  |  |  |
| Good | 136 | 86 | 49 | 0 |
|  | $10.7 \%$ | $12.9 \%$ | $8.3 \%$ | $3.6 \%$ |
| Fair | 405 | 210 | 191 | 4 |
|  | $32.0 \%$ | $31.8 \%$ | $32.3 \%$ | $28.2 \%$ |
| Poor | 512 | 244 | 265 | 3 |
|  | $40.4 \%$ | $36.8 \%$ | $44.9 \%$ | $20.6 \%$ |
| DK/NA | 207 | 118 | 83 | 6 |
|  | $16.3 \%$ | $17.8 \%$ | $14.0 \%$ | $47.5 \%$ |

## Q8. Rating of Traffic Flow in City or Town Age Comparisons

The 55-to-59- and 75-to-84-year-olds were more likely to rate traffic flow as "Good," whereas residents ages 25 to 34 had a higher tendency to indicate an opinion of "Poor."

|  | Age |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | 18-24 | 25-34 | 35-44 | 45-54 | 55-59 | 60-64 | 65-74 | 75-84 | 85 and over | Not sure/ DK/NA |
| Total | 1268 | 209 | 281 | 224 | 213 | 84 | 77 | 103 | 48 | 12 | 16 |
| Excellent | $\begin{gathered} 136 \\ 10.7 \% \\ \hline \end{gathered}$ | $\begin{gathered} 20 \\ 9.7 \% \end{gathered}$ | $\begin{gathered} 19 \\ 6.9 \% \end{gathered}$ | $\begin{gathered} \hline 26 \\ 11.5 \% \\ \hline \end{gathered}$ | $\begin{gathered} \hline 25 \\ 11.6 \% \\ \hline \end{gathered}$ | $\begin{gathered} 8 \\ 9.6 \% \end{gathered}$ | $\begin{gathered} 8 \\ 9.9 \% \\ \hline \end{gathered}$ | $\begin{gathered} 18 \\ 17.1 \% \\ \hline \end{gathered}$ | $\begin{gathered} 8 \\ 16.5 \% \\ \hline \end{gathered}$ | $\begin{gathered} 2 \\ 16.2 \% \\ \hline \end{gathered}$ | $\begin{gathered} 2 \\ 14.8 \% \\ \hline \end{gathered}$ |

## Q8. Rating of Traffic Flow in City or Town Regional Comparisons

The West Kern, Mountains and East Kern region residents had a higher tendency to rate traffic flow as "Excellent," and additionally, Mountains and East Kern residents were more likely to say "Good." On the other hand, Central Valley region residents tended to rate traffic flow as "Fair;" and West Kern and Central Valley residents also had a higher likelihood to respond "Poor."

|  | Zip Code Area |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | West Kern | Central <br> Valley | Mountains | East Kern |
| Total | 1268 | 50 | 1020 | 82 | 116 |
|  | 136 | 17 | 62 | 23 | 35 |
| Good | $10.7 \%$ | $32.8 \%$ | $6.0 \%$ | $27.7 \%$ | $30.1 \%$ |
|  | 405 | 18 | 293 | 37 | 57 |
|  | $32.0 \%$ | $36.8 \%$ | $28.7 \%$ | $44.7 \%$ | $49.5 \%$ |
| Poor | 512 | 10 | 463 | 22 | 18 |
|  | $40.4 \%$ | $19.6 \%$ | $45.4 \%$ | $26.6 \%$ | $15.3 \%$ |
| DK/NA | 207 | 5 | 195 | 1 | 6 |
|  | $16.3 \%$ | $10.8 \%$ | $19.2 \%$ | $0.7 \%$ | $5.0 \%$ |

When respondents were asked for the reason behind their rating of traffic flow, the answer given most often was "Traffic/Congestion," by half of the residents interviewed, and was followed by "Construction" and "Unsafe drivers/Impaired." All other responses received less than 10\% mentions.

## Q10. Average Commute Time ( $\mathrm{n}=1,268$ )

The current survey results reveal some significant shifts in commute durations, resulting in what appears to be shorter drive times. Most significantly, the number of residents who commute 10 minutes or less increased from $21.4 \%$ in 2018 to $31.6 \%$ in 2019. Accordingly, the number of residents who reported an 11 to 20 minute commute decreased from $24.3 \%$ in 2018 to $20.2 \%$ in the current results, while those who said they commute 41 to 60 minutes decreased from $16.5 \%$ in 2018 to $14.3 \%$ in 2019.

The data are illustrated on the following two pages.

Q10. Average Commute Time ( $\mathrm{n}=1,268$ )

## Q10. Average Commute Time ( $\mathrm{n}=1,268$ ) Continued

## Q10. Average Commute Time

 Gender ComparisonsThere were no statistically significant differences in response among genders.

|  | Respondent's Gender |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Male |  | Female |  | Other |  |
| 10 Minutes or less | $30.6 \%$ | 204 | $33.0 \%$ | 194 | $8.6 \%$ | 1 |
| 11 to 20 Minutes | $19.0 \%$ | 125 | $21.8 \%$ | 129 | $9.3 \%$ | 1 |
| 21 to 40 Minutes | $24.1 \%$ | 158 | $22.4 \%$ | 132 | $58.9 \%$ | 8 |
| 41 to 60 Minutes | $15.2 \%$ | 101 | $13.1 \%$ | 78 | $19.6 \%$ | 2 |
| More than 60 Minutes | $9.4 \%$ | 61 | $7.8 \%$ | 50 | $3.6 \%$ | 0 |
| DK/NA | $1.8 \%$ | 12 | $1.7 \%$ | 10 | $0.0 \%$ | 0 |

## Q10. Average Commute Time Age Comparisons

In terns of age groups, those ages 55 and older were more likely to report they have shorter commute durations

|  | Respondent's Age |  |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Q10. Average Commute Time Regional Comparisons

Residents of the Central Valley region tended to indicate they have longer commute times.

|  | Zip Code Area |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | West Kern |  | Central Valley |  | Mountains |  | East Kern |  |
| 10 Minutes or less | $47.4 \%$ | 25 | $29.2 \%$ | 298 | $43.0 \%$ | 35 | $37.7 \%$ | 44 |
| 11 to 20 Minutes | $11.8 \%$ | 6 | $21.5 \%$ | 220 | $13.2 \%$ | 11 | $16.3 \%$ | 19 |
| 21 to 40 Minutes | $12.2 \%$ | 6 | $31.1 \%$ | 262 | $15.1 \%$ | 11 | $19.4 \%$ | 20 |
| 41 to 60 Minutes | $9.9 \%$ | 5 | $14.7 \%$ | 150 | $9.6 \%$ | 8 | $15.7 \%$ | 19 |
| More than 60 Minutes | $18.0 \%$ | 8 | $7.1 \%$ | 73 | $18.9 \%$ | 15 | $12.1 \%$ | 14 |
| DK/NA | $.8 \%$ | 0 | $1.9 \%$ | 19 | $2.3 \%$ | 2 | $.8 \%$ | 1 |

## Q11. Average Commute Miles ( $\mathrm{n}=1,268$ )

In the current survey results, residents reported commute distances that were essentially identical for the ten mile or less commutes when compared with the 2018 data, and there was a substantial decrease in those who said they have an 11 to 20 mile commute ( $14.1 \%$ in 2019 vs. $21.9 \%$ in 2018). However, there were also significant increases apparent in the longer commutes ( 21 or more miles) between 2018 and 2019. Residents who indicated they travel 21 to 40 miles to work or school registered as $25.1 \%$ in 2019 (compared with $16.0 \%$ in 2018) and those who commute more than 40 miles increased from $14.1 \%$ in 2018 to $17.9 \%$ in 2019.

Charts illustrating this data are presented on the following pages.

## Q11. Average Commute Miles Gender Comparisons

There were no statistically significant differences in responses given among genders.

|  | Respondent's Gender |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Male |  | Female |  | Other |  |
| 5 miles or less | $21.3 \%$ | 141 | $25.5 \%$ | 150 | $11.3 \%$ | 1 |
| 6 to $\mathbf{1 0}$ miles | $16.3 \%$ | 107 | $17.4 \%$ | 104 | $5.7 \%$ | 1 |
| 11 to $\mathbf{2 0}$ miles | $21.1 \%$ | 141 | $19.1 \%$ | 113 | $18.4 \%$ | 2 |
| 21 to 40 miles | $15.6 \%$ | 103 | $22.2 \%$ | 130 | $49.7 \%$ | 6 |
| More than 40 miles | $22.7 \%$ | 156 | $12.4 \%$ | 75 | $14.7 \%$ | 1 |
| DK/NA | $2.6 \%$ | 17 | $3.4 \%$ | 20 | $0 \%$ | 0 |

## Q11. Average Commute Miles Age Comparisons

Residents ages 55 and older were more likely to report they have the shortest commute distances.

|  | Respondent's age |  |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 8 - 2 4}$ | $\mathbf{2 5 - 3 4}$ | $\mathbf{3 5 - 4 4}$ | $\mathbf{4 5 - 5 4}$ | $\mathbf{5 5 - 5 9}$ | $\mathbf{6 0 - 6 4}$ | $\mathbf{6 5 - 7 4}$ | $\mathbf{7 5 - 8 4}$ | $\mathbf{8 5 +}$ | DK/NA |
| 5 miles or less | $16.9 \%$ | $17.9 \%$ | $16.8 \%$ | $21.3 \%$ | $25.4 \%$ | $41.3 \%$ | $36.1 \%$ | $52.3 \%$ | $61.1 \%$ | $\mathbf{1 4 . 9 \%}$ |
| $\mathbf{6}$ to $\mathbf{1 0}$ miles | $16.5 \%$ | $21.8 \%$ | $15.9 \%$ | $17.8 \%$ | $18.2 \%$ | $8.3 \%$ | $11.0 \%$ | $15,7 \%$ | $6.9 \%$ | $\mathbf{1 4 . 2} \%$ |
| $\mathbf{1 1}$ to $\mathbf{2 0}$ miles | $20.4 \%$ | $19.8 \%$ | $23.7 \%$ | $19.7 \%$ | $17.2 \%$ | $15.3 \%$ | $25.2 \%$ | $8.7 \%$ | $13.8 \%$ | $32.9 \%$ |
| 21 to $\mathbf{4 0}$ miles | $26.4 \%$ | $21.3 \%$ | $18.5 \%$ | $18.6 \%$ | $18.2 \%$ | $22.7 \%$ | $6.8 \%$ | $4.9 \%$ | $3.2 \%$ | $10.4 \%$ |
| More than $\mathbf{4 0}$ miles | $17.2 \%$ | $19.0 \%$ | $23.5 \%$ | $18.5 \%$ | $19.7 \%$ | $11.4 \%$ | $12.2 \%$ | $7.6 \%$ | $11.9 \%$ | $8.9 \%$ |
| DK/NA | $2.6 \%$ | $0.1 \%$ | $1.6 \%$ | $4.2 \%$ | $1.7 \%$ | $0.6 \%$ | $8.8 \%$ | $10.8 \%$ | $3.2 \%$ | $18.7 \%$ |

## Q11. Average Commute Miles Regional Comparisons

Residents of the Central Valley region were more likely to have 6 to 40-mile commutes.

|  | Zip Code Area |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | West Kern |  | Central Valley |  | Mountains |  | East Kern |  |
| 5 miles or less | $47.8 \%$ | 25 | $20.1 \%$ | 205 | $37.8 \%$ | 32 | $28.5 \%$ | 33 |
| 6 to $\mathbf{1 0}$ miles | $11.9 \%$ | 7 | $17.6 \%$ | 181 | $4.3 \%$ | 13 | $19.7 \%$ | 23 |
| 11 to $\mathbf{2 0}$ miles | $4.2 \%$ | 0 | $22.7 \%$ | 230 | $13.2 \%$ | 12 | $11.9 \%$ | 14 |
| 21 to $\mathbf{4 0}$ miles | $9.2 \%$ | 4 | $20.6 \%$ | 210 | $11.4 \%$ | 10 | $13.2 \%$ | 16 |
| More than $\mathbf{4 0}$ miles | $23.7 \%$ | 10 | $15.8 \%$ | 163 | $30.5 \%$ | 27 | $25.6 \%$ | 30 |
| DK/NA | $3.2 \%$ | 12 | $3.2 \%$ | 32 | $2.9 \%$ | 2 | $1.0 \%$ | 1 |

## Q12. Most Likely Alternative Transportation (drive alone only from Q6) ( $\mathrm{n}=861$ )

Overall, there were decreases in preference, some significant, for alternative transportation methods when compared with years past. Almost half of the residents, even when asked a second time, said they prefer to drive alone over other potential transit modes. The categories "Carpool or vanpool" and "Traditional bus service" saw the most significant reductions in preference.

The results are shown in a chart on the following pages.

## Q12. Most Likely Alternative Transportation (drive alone only from Q6) (n=861) Continued

## Q12. Most Likely Alternative Transportation (drive alone only from Q6) (n=861) Continued

## Q12. Most Likely Alternative Transportation Gender Comparisons

Women were more likely to say they utilize "Express bus service" as their preferred alternative transit mode, while those who identify as "Other" tended to state they use taxis.

|  | Respondent's Gender |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |

## Q12. Most Likely Alternative Transportation Age Comparisons

The 75-to-84-year-olds tended to indicate more often that they would prefer to "Drive alone" as an alternative transportation method, while those 45 to 54 and 65 to 74 said they were open to "Express bus service."

|  | Age |  |  |  |  |  |  |  |  |  |  |

## Q13. Opinion on New Employers' Effect on Traffic <br> ```(n=1,351)```

More than $80 \%$ of residents indicated they felt the effect of the new employers in the region on traffic was worth it. Only slightly more than one in ten residents expressed a negative opinion on this topic.

## Q13. Opinion on New Employers' Effect on Traffic

## Gender Comparisons

In terms of gender, residents who described their gender as "Other" had a greater tendency to say that the new employers' impact on traffic was "Definitely not worth it."

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1351 | 684 | 653 | 15 |
|  | 515 |  |  |  |
| Probably worth it | $38.1 \%$ | $38.8 \%$ | 242 | 7 |

# Q14. Current Housing Type ( $n=1,351$ ) 

In general, the current survey reflects the same choices for types of housing as they did in 2018. However, there was a small decrease in the number of respondents who said they live in a single-family home with a large yard, and a slight increase in those who said they live in an apartment.

The results are illustrated as a chart on the following page.

# Q14. Current Housing Type ( $\mathrm{n}=1,351$ ) Continued 

## Q14. Current Housing Type

## Gender Comparisons

Men were more likely to say they live in a single-family home with a small yard, while residents who identified as "Other" had a greater tendency to say they live in a single-family home with a large yard.

|  | Respondent's Gender |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Total | Male | Female | Other |
| Total | 1351 | 684 | 653 | 15 |
|  |  |  |  |  |

## Q14. Current Housing Type <br> Length of Residence Comparisons

Those residents who have lived in Kern County for one year to less than five years were more likely to report they live in a townhouse or condominium.

|  | Years Lived in Kern County |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | Total | Less than <br> one year | One year to <br> less than <br> five years | Five years <br> to less than <br> ten years | 10 years or <br> more |
| Total | 1351 | 31 | 98 | 103 | 1119 |
| A single-family home with a small yard | 496 | 14 | 30 | 36 | 415 |
| A single-family home with a large yard | $36.7 \%$ | $46.1 \%$ | $30.9 \%$ | $35.3 \%$ | $37.1 \%$ |
| A townhouse or condominium | $44.7 \%$ | 10 | 39 | 39 | 515 |
| A building with offices and stores on the first | $31.5 \%$ | $39.9 \%$ | $38.1 \%$ | $46.0 \%$ |  |
| floor and condominiums on the upper floors | $0.0 \%$ | 0 | 9 | 5 | 31 |
| An apartment | 183 | 0 | 7 | 0 | 19 |
| DK/NA | $13.5 \%$ | $21.4 \%$ | $18.9 \%$ | $17.9 \%$ | $12.4 \%$ |

Residents who reported the lower incomes, $\$ 0$ to $\$ 74,999$ per year, had a greater tendency to say they live in an apartment. In contrast, those who reported a $\$ 25,000$ and more salary were more likely to live in a singlefamily home with a large yard.

## Q15. Housing Option Preferences Regional Comparisons

In terms of region, West Kern residents were more likely to indicate a preference for single family homes with a small yard and townhouse or condominiums, whereas Central Valley residents had a higher tendency to express interest in multi-use buildings and apartments. The Mountains residents were less likely to be interested in living in townhouses or condominiums, multi-use buildings, and apartments. The data continues on the next page.

## Q15. Housing Option Preferences <br> Regional Comparisons Continued

## Q15. Housing Option Preferences Income Comparisons

Residents who reported in the lower income categories had a greater tendency to state a preference for singlefamily homes with a small yard, townhouses and condominiums, and apartments. Residents reporting an annual income of $\$ 100,000$ or more were more likely to reject the idea of living in these housing options, as well as multi-use buildings, but did show a preference for single-family homes with large yards. The data is shown below and on the next page.

## Q15. Housing Option Preferences Length of Residence Comparisons

Residents who lived in Kern County for less than one year were more likely to express interest in a singlefamily home with a small yard, while residents of ten years or more were more inclined to prefer a single-family home with a large yard. The results are shown below and continue on the following page.

|  |  | Years Lived in Kern County |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Q15. Housing Option Preferences Current Housing Comparisons Continued

Consistent with earlier findings, when segmenting housing preferences according to current housing type, it is apparent that large majorities of residents living in a single-family home with a small yard, a single-family home with a large yard, and a townhouse, condo or apartment would prefer a single-family home with a large or small yard. A similar majority of those living in a townhome or condo would be willing to remain in a townhome or condo. The population of residents living in a mixed-use building are too small to make meaningful comparisons.

## Q15. Housing Option Preferences

## Ethnicity Comparisons

African American or Black and Hispanic or Latino residents were more likely to express interest in an apartment, and African American or Black residents were also open to a townhouse or condominium. However, Caucasian or White residents had a greater tendency to say "No" to all options except for the single-family home with a small yard. The results are below and continued on the next page.

|  |  | Ethnic Group |  |  |  |  |  |  |  |  |  |

## QJ. Household Income

## QK. Survey Language

Appendix B: Detailed Methodology

## Survey Parameters

The respondents were selected using a random sample of voter file numbers, and a supplemental list of Hispanic surname residents. Interviewers first asked potential respondents a series of questions referred to as "Screeners." These questions were used to ensure that the person lived in Kern County and was at least 18 years of age. Additionally, in order to ensure that the sample was representative of the ethnicity of the County population, 20 interviews were conducted in Spanish.
Overall, 1,351 residents in Kern County completed the survey, representing the population of approximately 621,092 adult residents. The study parameters resulted in a margin of error of plus or minus 2.66 percent. Interviews were conducted from February 19 to March 1, 2019, and the average interview time was 22 minutes. Interviews were conducted in either Spanish ( $\mathrm{n}=$ 20 ) or English ( $n=1,331$ ), depending on the preference of the resident who was surveyed.
In order to allow segmentation of the results by region of Kern County, three areas of the County were over-sampled. During the study, oversamples were completed in each of the following regions - West Kern ( $n=181$ ), Mountains ( $n=216$ ), and East Kern ( $n=206$ ), and the remaining interviews were completed in the Central Valley region ( $n=748$ ). For the overall results presented in this report, the over-sampling was corrected by statistically weighting the data by region.

## Sample and Weighting

Once collected, the sample of respondents was compared with the actual adult population of Kern County (weighted to the 2016 American Community Survey (ACS) for gender, age and ethnicity) to examine possible differences between the demographics of the sample of respondents and the actual County population. In addition, the data were weighted to the 2010 Census data for region of residence. The data were weighted to the 2017 American Community Survey (ACS) for gender, age and ethnicity, and weighted to the 2010 Census data for region and home ownership.

## Questionnaire Methodology

To avoid the problem of systematic position bias, where the order in which a series of questions is asked systematically influences the answers, several questions in the survey were randomized such that the respondents were not consistently asked the questions in the same order. The series of items in Questions $3,4,5,14$, and 15 were randomized to avoid such position bias.
Questions 3, 4 and G allowed the residents surveyed to mention multiple responses. For this reason, the response percentages sum to more than 100, and these represent the percent of residents who mentioned a particular response, rather than the percent of total responses.

Because a survey typically involves a limited number of people who are part of a larger population group, by mere chance alone there will almost always be some differences between a sample and the population from which it was drawn. These differences are known as "sampling error" and they are expected to occur regardless of how scientifically the sample has been selected. The advantage of a scientific sample is that we are able to calculate the sampling error. Sampling error is determined by four factors: the population size, the sample size, a confidence level, and the dispersion of responses.
For example, the following table shows the possible sampling variation that applies to a percent result reported from a probability type sample. Because the sample of 1,351 adult residents age 18 or older was drawn from the estimated population of Kern County of approximately 621,092 adult residents, one can be $95 \%$ confident that the margin of error due to sampling will not vary, plus or minus, by more than the indicated number of percent points from the result that would have been obtained if the interviews had been conducted with all persons in the universe. As the table on the following page indicates, the margin of error for all aggregate responses is between 1.60 and $2.66 \%$ for the survey.
This means that, for a given question with dichotomous response options (e.g., Yes/No) answered by 1,351 respondents, one can be $95 \%$ confident that the difference between the percent breakdowns of the sample and those of the total population is no greater than $2.66 \%$. The percent margin of error applies to both sides of the answer, so that for a question in which $50 \%$ of respondents said yes, one can be $95 \%$ confident that the actual percent of the population that would say yes is between $47 \%$ ( 50 minus 2.66 ) and $53 \%$ ( 50 plus 2.66).
The margin of error for a given question also depends on the distribution of responses to the question. The $2.66 \%$ refers to dichotomous questions where opinions are evenly split in the sample with $50 \%$ of respondents saying yes and $50 \%$ saying no. If that same question were to receive a response in which $10 \%$ of the respondents say yes and $90 \%$ say no, then the margin of error would be no greater than plus or minus $1.60 \%$. As the number of respondents in a particular subgroup (e.g., age) is smaller than the number of total respondents, the margin of error associated with estimating a given subgroup's response will be higher. Due to the high margin of error, Godbe Research cautions against generalizing the results for subgroups that are comprised of 25 or fewer respondents.

| n | Distribution of Responses |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $90 \% / 10 \%$ | $80 \% / 20 \%$ | $70 \% / 30 \%$ | $60 \% / 40 \%$ | $50 \% / 50 \%$ |
| 1351 | $1.60 \%$ | $2.13 \%$ | $2.44 \%$ | $2.61 \%$ | $2.66 \%$ |
| 1000 | $1.86 \%$ | $2.48 \%$ | $2.84 \%$ | $3.03 \%$ | $3.10 \%$ |
| 800 | $2.08 \%$ | $2.77 \%$ | $3.17 \%$ | $3.39 \%$ | $3.46 \%$ |
| 600 | $2.40 \%$ | $3.20 \%$ | $3.67 \%$ | $3.92 \%$ | $4.00 \%$ |
| 400 | $2.94 \%$ | $3.92 \%$ | $4.49 \%$ | $4.80 \%$ | $4.90 \%$ |
| 300 | $3.39 \%$ | $4.53 \%$ | $5.18 \%$ | $5.54 \%$ | $5.66 \%$ |
| 200 | $4.16 \%$ | $5.54 \%$ | $6.35 \%$ | $6.79 \%$ | $6.93 \%$ |

The questions discussed and analyzed in this report comprise a subset of various crosstabulation tables available for each question. Only those subgroups that are of particular interest or that illustrate particular insights are included in the discussion. Should readers wish to conduct a closer analysis of subgroups for a given question, the complete breakdowns appear in Appendix E. These crosstabulation tables provide detailed information on the responses to each question by demographic and behavioral groups that were assessed in the survey. A typical crosstabulation table is shown here.

A short description of the item appears on the left-hand side of the table. The item sample size ( $n=1,201$ ) is presented in the first column of data under "Total."
The results to each possible answer choice of all respondents are presented in the first column of data under "Total." The aggregate number of respondents in each answer category is presented as a whole number, and the percent of the entire sample that this number represents is just below the whole number. In this example, among the total respondents, 472 respondents reported their "very satisfied" response, and this number of respondents equals $39.3 \%$ of the total sample size of 1,201 . Next to the "Total" column are the other columns representing responses from the male and female respondents. The data from these columns are read in exactly the same fashion as the data in the "Total" column, although each group makes up a smaller percent of the entire sample.

| EXAMPLE OF DATA CROSSTABULATION TABLE |  | Respondent's Gender |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Male | Female |
| 1. Generally speaking are you satisfied or dissatisfied with the quality of life in your city or town? | Total | 1201 | 619 | 582 |
|  | Very satisfied | 472 | 233 | 239 |
|  |  | 39.3\% | 37.6\% | 41.1\% |
|  | Somewhat satisfied | 505 | 276 | 229 |
|  |  | 42.1\% | 44.7\% | 39.4\% |
|  | Somewhat dissatisfied | 130 | 63 | 67 |
|  |  | 10.8\% | 10.1\% | 11.5\% |
|  | Very dissatisfied | 87 | 45 | 42 |
|  |  | 7.3\% | 7.2\% | 7.3\% |
|  | DK/NA | 7 | 2 | 5 |
|  |  | 6\% | 4\% | .8\% |

To test whether or not the differences found in percent results among subgroups are likely due to actual differences in opinions or behaviors - rather than the results of chance due to the random nature of the sampling design - a "z-test" was performed. In the headings of each column are labels, "A," "B," "C," etc. along with a description of the variable. The "z-test" is performed by comparing the percent in each cell with all other cells in the same row within a given variable (within Respondent's Gender in the pictured table, for example).

The results from the "z-test" are displayed in a separate table below the crosstabulation table. If the percent in one cell is statistically different from the percent in another, the column label will be displayed in the cell from which it varies significantly. For instance, in the adjacent table, a significantly higher percent of men (44.7\%) reported "somewhat satisfied" than women (39.4\%). Hence, the letter "B," which stands women, appears under Column "A," which stands for men. The letters in the table indicate the differences where one can be $95 \%$ confident that the results are due to actual differences in opinions or behaviors reported by subgroups of respondents.

It is important to note that the percent difference among subgroups is just one piece in the equation to determine whether or not two percentage figures are significantly different from each other. The variance and sample size associated with each data point is integral to determining significance. Therefore, two calculations may be different from each other, yet the difference may not be statistically significant according to the " $z$ " statistic.

| EXAMPLE OF DATA CROSSTABULATION TABLE |  | Respondent's Gender |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Total | Male | Female |
| 1. Generally speaking are you satisfied or dissatisfied with the quality of life in your city or town? | Total | 1201 | 619 | 582 |
|  | Very satisfied | 472 | 233 | 239 |
|  |  | 39.3\% | 37.6\% | 41.1\% |
|  | Somewhat satisfied | 505 | 276 | 229 |
|  |  | 42.1\% | 44.7\% | 39.4\% |
|  | Somewhat dissatisfied | 130 | 63 | 67 |
|  |  | 10.8\% | 10.1\% | 11.5\% |
|  | Very dissatisfied | 87 | 45 | 42 |
|  |  | 7.3\% | 7.2\% | 7.3\% |
|  | DK/NA | 7 | 2 | 5 |
|  |  | .6\% | .4\% | .8\% |

| EXAMPLE OF DATA FOR Z-TEST | Respondent's <br> Gender |  |  |
| :--- | :--- | :---: | :---: |
|  | Male | Female |  |
|  | $(A)$ | $(B)$ |  |
| 1. Generally speaking <br> are you satisfied or <br> dissatisfied with the <br> quality of life in your city <br> or town? | Very satisfied |  |  |
|  | Somewhat <br> satisfied | B |  |
|  | Somewhat <br> dissatisfied |  |  |
|  | Very <br> dissatisfied |  |  |
|  | DK/NA |  |  |

## Understanding a Mean

In addition to the analysis of the percent of the responses, some results are discussed with respect to an average score. To derive the overall importance of an issue, Q5 for example, a number value was assigned to each response category - in this case,

The number values that correspond to respondents' answers were then averaged to produce a final score that reflects the overall importance of an issue. The resulting mean score makes the interpretation of the data considerably easier.
In the crosstabulation tables for Questions 5 of the survey, the reader will find mean scores. These mean scores represent the average response of each group. The table to the right shows the scales for each corresponding question. Responses of "DK/NA" were not included in the calculations of the means for any question.

| Question | Measure | Scale | Values |
| :---: | :--- | :--- | :--- |
|  |  |  | $+4.0=$ "Extremely Important" |
|  |  |  | +3.0 |
| Q5 | Importance | +4 to 0 | +2.0 |
|  | Ratings |  | +1.0 |
|  |  |  | $0.0=$ "Not Important" |

## Means Comparisons

A typical crosstabulation table of mean scores is shown in the adjacent table. All subgroups of interest concerning questions 5 are included in Appendix E.

The aggregate mean score for each item in the question series is presented in the first column of the data under "Total." For example, among all the survey respondents, the feature, "Providing programs to improve energy efficiency," earned a mean score of 1.3. Next to the "Total" column are other columns representing the mean scores assigned by the respondents grouped by Gender.
The data from these columns are read in the same fashion as the data in the "Total" column. To test whether two mean scores are statistically different, a "t-test" is performed. As in the case of the "z-test" for percentage figures, a statistically significant result is indicated by the letter representing the data column.

| EXAMPLE OF DATA FOR MEANS COMPARISON | Gender |  |  |
| :--- | :---: | :---: | :---: |
|  | Total | Male | Female |
| Providing programs to improve energy <br> efficiency | 1.3 | 1.4 | 1.2 |
| Providing programs to conserve natural <br> resources | 1.1 | 1.1 | 1.1 |
| Providing incentives for residents, businesses, <br> schools and churches to use solar and <br> windpower | .9 | .8 | .9 |

| EXAMPLE OF DATA FOR T-TEST | Gender |  |
| :--- | :---: | :---: |
|  | Male | Female |
|  | $(\mathrm{A})$ | (B) |
| Providing programs to improve energy <br> efficiency | B |  |
| Providing programs to conserve natural <br> resources |  |  |
| Providing incentives for residents, <br> businesses, schools and churches to use <br> solar and windpower |  |  |

## CLIENT EMAIL SETUP INFORMATION

## Step 1

The email address that was previously established (executive.director@kerncog.org) is still functioning and we will use it as before.
Step 2
As we have discussed in the past, providing email lists to update the voter file is helpful, but not required. Because of the changing survey environment, we no longer are looking for additional emails, but instead we are looking for resident lists that would include a cell phone number to update the voter file. The data needs to include separate fields for first name, last name, street address, and cell phone. If available to Kern COG, the format of the excel files should be:

## Client Check List

$\square$ Produce the "Text Sourcing Letter" on Kern COG stationary, sign and return it to Godbe Research via email.
$\square$ Send cell phone list if available to Godbe Research

## TEXT SOURCING LETTER

June 5, 2019

EZ Texting/Callfire
1410 2nd Street
Suite 200
Santa Monica, CA 90401
Dear Compliance Department:
The Kern Council of Governments, is a public agency governed by an elected,
Board. As such, the Kern Council of Governments commissioned Godbe
Research and McGuire Research Services to conduct a survey of voters to assist us in achieving our agency's government mission.

The source of the sample that Godbe Research and McGuire Research Services are using are publicly available, county voter registration records from Kern County that voters have opted to provide both landline and cell numbers, and email address. The landline or cell number is optional field and is not required to register to vote. Additionally, the survey invitation used by Godbe Research and McGuire Research Services clearly identifies the source of the list and allows participants to opt out of the process and ensures they will not be texted again for this research study.

We would appreciate the opportunity to complete this project which allows us to communicate with our constituents and allows registered voters to participate in the governmental process.

## Sincerely,

Ahron Hakimi
Executive Director
Kern Council of Governments

Godbe Research
2019 Kern Council of Governments Community Survey

## TEXT MESSAGE INVITATION

The Kern Council of Governments is conducting research on important issues in your area.
Your individual responses are entirely confidential and will be used for research purposes only. Your data will not be sold or provided to anyone. You will not be approached for any other reason. We are only interested in your opinions.

To participate, please click the link below.
<survey link with unique voter file id>
We ask that you please complete the survey on or before $\qquad$ 2019, after which it will be closed. Only one completed survey is allowed per invitation

Thank you in advance for your participation.
Regards,

Ahron Hakim
Executive Director
Kern Council of Governments
Please reply KCOG_REMOVE if you do not wish to be recontacted.
Please reply KCOG_HELP if you need assistance with the survey
Cell phone numbers for this survey were obtained from public records at the Registrar of Voters in Kern County and third-party opt-in sources.

## GENERAL EMAIL INVITATION

## From: executive.director@kerncog.org

Reply to: executive.director@kerncog.org
Subject: Participate in this important study about our community
Dear [insert name],
The Kern Council of Governments has commissioned GRA and McGuire Research independent research firms, to conduct research on important issues in your area.

Your individual responses are entirely confidential and will be used for research purposes only. Your data will not be sold or provided to anyone. You will not be approached for any other reason - we are only interested in your opinions.

For the individual named above, you can access the survey by simply clicking on the link below. If your email does not support links, cut and paste the entire link into your browser.
<survey link with unique voter file id>
We ask that you please complete the survey on or before $\qquad$ 2019, after which it will be closed.

Thank you in advance for your participation.
Regards,
Ahron Hakimi
Executive Director
Kern Council of Governments

Technical Issues: If you have technical issues or questions with the survey link, password or completing the survey form please contact Technical Assistance (pwood@mcguireresearch.com).
Questions about the Agency or this Survey: If you have questions about the Kern Council of Governments, or the purpose of this survey please contact
executive.director@kerncog.org

2019 Kern Council of Governments Community Survey

## INTRODUCTION \& SCREENERS

## [ONLINE INTRODUCTION]

Thank you for your interest in taking our survey to help understand issues in Kern County. All of your answers to the survey will be kept strictly anonymous and confidential.

## Survey Instructions:

Once you have answered all the questions on a page, click the "Next" button in the lower-left corner of the screen to continue. If you have any technical difficulties with the survey, please email: Technical Assistance.

## [PHONE INTERVIEW

Hello, May I speak with $\qquad$ ? Hello, my name is $\qquad$ and I'm calling on behalf of GRA, a public opinion research firm. We're conducting a survey concerning some mportant issues in Kern County, and we would like to hear your opinions, we really
.
SCHEDULE CALL BACK. LISTED: ASK FOR SPECIFIC PERSON IF NOT AVAILABLE
ASK ANOTHER ADULT 18+ IN HOUSEHOLD]
[IF NEEDED]: This is a study about issues of importance in your community. It is a survey only and I am not selling anything.
[IF THE PERSON ASKS WHY YOU ONLY WANT TO TALK TO THE INDIVIDUAL LISTED
ON THE SAMPLE, OR ASKS IF THEY ARE ABLE TO PARTICIPATE INSTEAD OF THE
INDIVIDUAL, THEN SAY: "I'm sorry, but for statistical purposes this survey must only be
completed by this particular individual."]
[IF THE INDIVIDUAL INDICATES THAT THEY ARE AN ELECTED OFFICIAL, THANK
THEM FOR THEIR TIME POLITELY EXPLAIN THAT THE FOCUS OF THIS SURVEY IS
ON THE PUBLIC'S PERCEPTION OF ISSUES, AND TERMINATE THE INTERVIEW.]
[IF THE INDIVIDUAL SAYS THEY ARE ON THE NATIONAL DO NOT CALL LIST,
RESPOND BASED ON THE GUIDELINES FROM THE MARKETING RESEARCH
ASSOCIATION. FOR EXAMPLE, IF THE INDIVIDUAL SAYS: "There's a law that says you can't call me," RESPOND WITH: "Most types of opinion research studies are exempt under the law that congress passed. That law was passed to regulate the activities of the
telemarketing industry. This is a legitimate research call. Your opinions count!"].
Before we get started, l'd like to verify that you are eligible to complete the survey.
i. But first, I need to know if I have reached you on a cell phone, and if so, are you in a place where you can talk safely without endangering yourself or others?

| Yes, cell and can talk safely $\qquad$ 1 <br> Yes, cell but cannot talk safely $\qquad$ <br> No, not on cell $\qquad$ - 3 <br> [DON'T READ] DK/NA/REFUSED --------------------99 |

| One year to less than five <br> years <br> Five years to less than ten <br> years <br> 10 years or more | $a^{a}$ | $a$ |  |

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

## Comparisons of Column Proportions ${ }^{\text {b,c }}$

a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with
the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C)) . $055^{5, c}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the
key of the category with the smaller column proportion appears in
the category with the larger column proportion.
Significance level for upper case letters ( $A, B, .05^{\text {a,b }}$,
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

|  | Very dissatisfied |  |  | A |
|  | DK/NA |  |  |  |

Results are based on two-sided tests. For each significant pair, the key of the category with the
smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $05^{\text {a,b }}$.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the categony in the proportion,

This category is not used in comparisons because its column propotion is equal to zen or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {a,b }}$

|  |  | Interview Type |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Landline | Cell phone | Email invite |
|  |  | (A) | (B) | (C) |
| 2. Looking ahead to the next 20 years, do you think the quality of life in your city or town will stay about the same as today, or will it be better or worse? | Much better | C | A C |  |
|  | Somewhat better |  |  |  |
|  | Stay about the same | B C |  | B |
|  | Somewhat worse |  |  | A B |
|  | Much worse |  | A | A |
|  | DK/NA |  |  |  |

Results are based on two-sided tests. For each significant pair, the key of the category with
the smaller column proportion appears in the category with the larger column proportion.
the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters $(A, B, C)$ : $05^{, a, b}$
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for
Significance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research I// KCOG 2019 Community Survey |/I Crosstabs 04-09-19
Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the the larger column proportion.
ignificance level for upper case letters (A, B, C): 05 $5^{\text {b,c }}$
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, : $.05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {a,b }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C$ ): $05^{\text {a,b }}$
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category winh ine larger column proportion.
Significance level for upper case letters (A, B, C): : $05^{\text {a,b }}$
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair the key of the category
with the smaller column proportion appears in the category with the larger column
proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research I// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research I// KCOG 2019 Community Survey |/I Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.

A, $B, C): .05^{\text {b, }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research II KCOG 2019 Community Survey III Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the
smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C): .05^{, b, C}$
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research I// KCOG 2019 Community Survey |/I Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller
column proportion appears in the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions Cests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// KCOG 2019 Community Survey I// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): 05 b,C
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.

Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions Cests.

Godbe Research /// KCOG 2019 Community Survey I// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the
category with the larger column proportion. category with the larger column proportion.
Significance level for upper case letters (A,
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A,
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Godbe Research I/I KCOG 2019 Community Survey I/I Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {a,b }}$

Godbe Research I// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {a,b }}$

Results are based on two-sided tests. For each significant pair, the key of the category with
the smaller column proportion appears in the category with the larger column proportion.
the smaller column proportion appears in the category with
Significance level for upper case letters ( $A, B, C): .05,0, B$
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research I// KCOG 2019 Community Survey |/I Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, $C): .05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): 05 b,C
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction

Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research /// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// KCOG 2019 Community Survey I// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $05^{\text {b, }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.

A, $B, C): .05^{\text {b, }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research /// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters $(A, B, C): 05^{b, c}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Godbe Research /// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests. For each significant pair, the key of the
category with the smaller column proportion appears in the category with the larger
Significance level for upper case letters (A, B, C): . $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the
smaller column proportion appears in the category with the larger column proportion.
smaller column proportion appears in the category with the
Significance level for upper case letters (A, B, C): $.05^{\text {b,C }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the $k$ es
proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): 05 b,c
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Godbe Research /// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $.05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

column proportion appears in the category with the largert column proportion
Sianifical
Significance level for upper case letters ( $A, B, C$ ): 05
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the categif wis in column proportion.
sion level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant
category with the larger column proportion.
Significance level for upper case letters (A, B, C): $.05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Signticance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the
cestegory with the larger column proportion.
Significance level for upper case letters (A, B, C): $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one,
.Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Godbe Research /// KCOG 2019 Community Survey I// Crosstabs 04-09-19
Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Signince level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the categoy wh the larger column proportion.
ificance level for upper case letters (A, B, C): $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {a,b }}$

Results are based on two-sided tests. For each
significant pair, the key of the category with the
smaller column proportion appear
with the larger column proportion.
Significance level for upper case letters ( $A, B, C$ )
$05^{, b}$
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

|  |  | Date |
| :---: | :---: | :---: |
|  |  | Mar. 1 |
|  |  | (K) |
| 8. Based on your personal experience, how would you rate traffic flow in your city or town? Is traffic flow excellent, good, fair, or poor? | Excellent | a |
|  | Fair |  |
|  | Poor |  |
|  |  | a |

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion
Significance level for uper case leters ( $A, B, C): .05^{b, c}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

## Godbe Research /// KCOG 2019 Community Survey I// Crosstabs 04-09-19

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the categoy with the larger column proportion.
innificance level for upper case letters (A, B,C): $05^{\text {c,d }}$
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C)$ : $.05^{c, d}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. This category is not used in comparisons because the sum of case weights is less than two.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $.05^{\circ}$.
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

proportion appears in the category with the larger columnt proportion.
Significance level for upper case letters (A, B, C): $0.5^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C$ ): $.05^{\text {c,d }}$
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the erger column proportion.
Significance level for upper case letters (A, B, : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $05^{5}, \mathrm{c}$
b. Tests are adjus not used in comparisons because its column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the small column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C)$ : $05, C$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
c. Cell

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the erger column proportion.
Significance level for upper case letters (A, B, C): $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests. For each signific appears in the category with the larger column proportion
a. This category is not used in comparisons because ins column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// KCOG 2019 Community Survey /// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C)$ : $05, C$
vel or upper case letters (A, B, C): :05 bi,
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
c. Cells.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $\mathrm{A}, \mathrm{B}, \mathrm{C}$ ): $05^{\mathrm{b}, \mathrm{c}}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the
of the category with the smaller column proportion appears in category with the larger column proportion.
Significance level for upper case letters (A, B, C): $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the Sategoificance level for upper case letters (A, B,C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
c. Cell costs.

Godbe Research /// KCOG 2019 Community Survey I/ Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {a,b }}$

Results are based on two-sided tests. For each significa
pair, the key of the category with the smaller column
proportion appears in the category with the larger column
proportion.
proportion.
Significance level for upper case letters (A, B, C): $.05^{\text {a,b }}$
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Godbe Research /// KCOG 2019 Community Survey I// Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the key of the
category with the smaller column proportion appears in the category with the egery with the smalle
Significance level for upper case letters (A, B, C): $05^{\text {b, }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, $): 05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For
category with the larger column proportio
category with the larger column proportion.
Significance level for upper case letters (A, B, C): . $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): . $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the
category with the smaller column proportion appears in the category with the egory with the smalle
avel for upper case letters (A, B, C): $05^{\text {b,c }}$
.Tis category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller Results are based on two-sided tests. For each significant pair, the key of the
column proportion appears in the category with the larger column proportion.
Significance level for upper case letters $(A, B, C): .05, C$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

| Not sure/DK/NA | CDE |  |  |  |  | a | appears in the category with the larger column proportion. Significance level for upper case letters ( $A, B, C$ ): $: 05^{b, C}$

a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research /// KCOG 2019 Community Survey I/I Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\mathrm{b}, \mathrm{c}}$

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters $(A, B, C) .05, c$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

| Not sure/DK/NA |  |  |  |  |

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the categoy with the larger column proportion.
Significance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Results are based on two-sided tests. For each significant pair, the key of the category proportion.
Significance level for upper case letters (A, B, C): $05^{\text {b, }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant category with the larger column proportion.
Significance level for upper case letters (A, B, C): $.05^{\text {b,C }}$
a. This category is not used in comparisons because ins column propotis equio of one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the categif win larger column proportion,

a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the earger column proportion.
Significance level for upper case letters ( $A, B, C$ ): $.05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Godbe Research I// KCOG 2019 Community Survey |/I Crosstabs 04-09-19
Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the ,
a. This category is not used in comparisons because the sum of case weights is less than two.
b. This category is not used in comparisons because its column proportion is equal to zero or one
c. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
d. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Sianifance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

## Godbe Research I// KCOG 2019 Community Survey |/I Crosstabs 04-09-19

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the categoy wh the larger column proportion.

a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Comparisons of Column Proportions ${ }^{\text {a,b }}$

Results are based on two-sided tests. For each significant pair, the key of the category with the
smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters $(A, B, C): .05$, ,
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
b. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $05^{\text {b, }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction,
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters $(A, B, C): .05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters $(A, B, C): .05, C$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Comparisons of Column Proportions ${ }^{\text {b,c }}$

Godbe Research I// KCOG 2019 Community Survey |/I Crosstabs 04-09-19
Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the calegg arger column proportion.

This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion
appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C): .05$, ,
a. This category is not used in comparisons because its column proportion is equal to zero or one,
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

|  | Four or more DK/NA |  |  |  | a |  |  |

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller
column proportion appears in the category with the larger column proportion
Significance level for upper case letters (A, B, C): $05.5, C$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions

Godbe Research I/I KCOG 2019 Community Survey I/I Crosstabs 04-09-19
Comparisons of Column Proportions ${ }^{\text {b,c }}$

Results are based on two-sided tests. For each significant pair, the
key of the category with the smaller column proportion appears in
the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C$ ): $.05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C$ ): $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
c. Cests.

|  | 99 | a | a | a | a | a | a | a |

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the arger column proportion.
Significance level for upper case letters ( $A, B, C$ ): $.05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters ( $A, B, C$ ): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

|  | Other | a | a | a | a |
|  | Not sure/DK/NA | a | a | a | a |

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): $.05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1997 to 2000 | 1993 to 1996 | 1981 to 1992 | 1980 or before |
|  |  | (F) | (G) | (H) | (I) |
| I. How many children under the age of 18 live in your household? | None |  |  | A B |  |
|  | One |  |  |  | a |
|  | Two |  |  |  |  |
|  | Three |  | a |  | a |
|  | Four or more | a | a | a | a |
|  |  | a | a | a | a |

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the arger column proportion.
Significance level for upper case letters ( $A, B, C$ ): $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

column proportion.
Significance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions tests.

Results are based on two-sided tests. For each significant pair, the key of the category with the smaller column proportion appears in the category with the larger column proportion.
Significance level for upper case letters (A, B, C): : $05^{\text {b,c }}$
a. This category is not used in comparisons because its column proportion is equal to zero or one.
b. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction.
c. Cell counts of some categories are not integers. They were rounded to the nearest integers before performing column proportions
tests.

Results are based on two-sided tests assuming equal variances. For each significant pair, the key of the smaller category appears in the
category with the larger mean.
a. Tests are adjusted for all pairwise comparisons within a row of each innermost subtable using the Bonferroni correction
b. Cell counts in some subtables are not integers. They were rounded to the nearest integers before performing pairwise comparisons
